

# MULTI RESERVATION/RELEASE

## User guidance

User Guidance

Multi Reservation/Release

The “MULTI RESERVATION/RELEASE” button differs from the “RESERVATION/RELEASE” button in that it allows you to reserve multiple store items for the same account. For example: in the IPC document, you select a new pump. But for the pump, you also need to select packings and Unions. Find their part numbers in IPC. And now you can make only one part order request for one airplane (account) and this order will include the pump itself and consumables.

1. Click on the “Stock” to begin to work with module.

2. Highlight the save line and upper toolbar will appear.

3. If you want to reserve several components on the definite airplane or release them on an airplane, push on the orange “MULTI RESERVATION/RELEASE” button. Editor will be open.

4. Select from combo box Account Number.

5. If it is necessary enter WO number or Task number.

6. Enter quantity, Unit and your signature.

7. Click on the “Reservation” to reserve components on the plane. To add more components, click on the stock item in the Stock List. And then press “RESERVATION” button again. You can see this data in the “Reservation” tab.

8. To release all stock items on the airplane, click on the “Release”. You can see this data in the “Released” tab.
