1. General

Aircraft Maintenance Program (AMP) is a final version of a maintenance program, based on the 'pattern' – the Logical Model, which can be modified for a particular Aircraft Family.

The user's manual consists of nine sections: Aircraft Maintenance Program Creation, Aircraft maintenance program editor, AMP Position Structure Update, AMP Maintenance Requirements, AMP Maintenance Model, AMP Plan, POS – AMP MR, Task Effectivity, and MRB (Maintenance Review Board) Category Codes.

Aircraft Maintenance Program Creation provides step by step overview of the new AMP creation and how to open AMP screen.

Aircraft maintenance program editor gives you information about Editor items, AMP draft and how to disactivate the already existing AMP.

AMP Position Structure Update consists of the seven subjects. Here you can know how to add of the new component into the structure, also you give information of the overview of main and lower assemblies, substitute part number overview and registration and part effectivity registration.

AMP Maintenance Model is used for the distinction of all existing tasks and their future group completion.

In conformity with the selected Logical Model, a Maintenance Plan will be displayed, where all existing tasks can be distributed according to the Maintenance Model. Here you can add/delete any tasks to the Maintenance Model, if necessary.

B737-NG BOEING COMPANY -3 4 Material Management Shortage

- 1. Push "AMP Maintenance Program" button.
- 2. From the whole list select Operator name.

3. For corresponding AMP selected Operator, highlight AC family.

4. Push "Create" button. AMP Creating screen will appear.

5. AC Family, Operator Code ICAO and Operator Name will automatically appear. Click on the "Create" button to make AMP.

6. When the AMP is created you can open it by clicking on the "Open" button.

3. Aircraft maintenance program editor

1. After the AMP creation, fields such as "Created By", "Name", "Creation Date", "Code ICAO" and "Operator Name" will be automatically filled. Type only "AMP revision", "Revision Date" and "Remarks" if it is necessary.

2. The 'Active AMP' check box is selected, when this AMP is already used for a particular aircraft family.

3. If you want to create an AMP copy, push "to Draft" button.

The AMP Draft is usually used when an AMP is already active for a particular aircraft family, and you cannot apply it for another aircraft family. When you create a draft, the whole Maintenance Program will be copied, and then can be modified and activated for another aircraft family.

4. A Draft version is yellow-coloured in the list.

5. If you add data in the AMP editor (for example change of the AMP revision) push on the toolbar "Update" button to save change data.

6. To disactivate the AMP, enter your ID in "Close By" field. Name and close date will automatically appear.

7. Push "Deactivate" button and corresponding AMP will be removed.

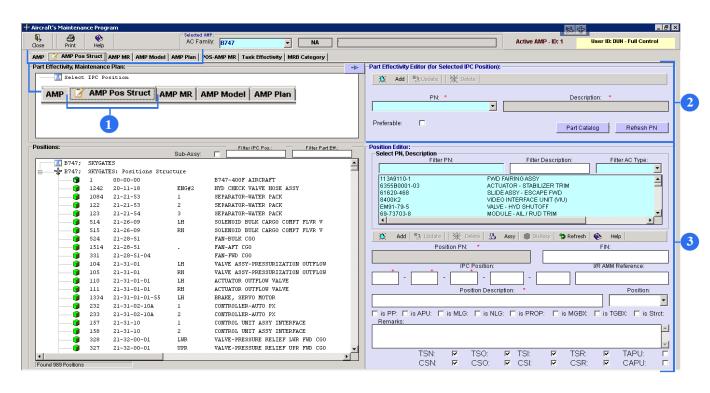

8. Push button with the needle to open or close Aircraft Maintenance Program Editor

PART M REV 1 ISSUE 2 User Guidance

4. AMP Position Structure Update

4.1. Add of the new component into the structure

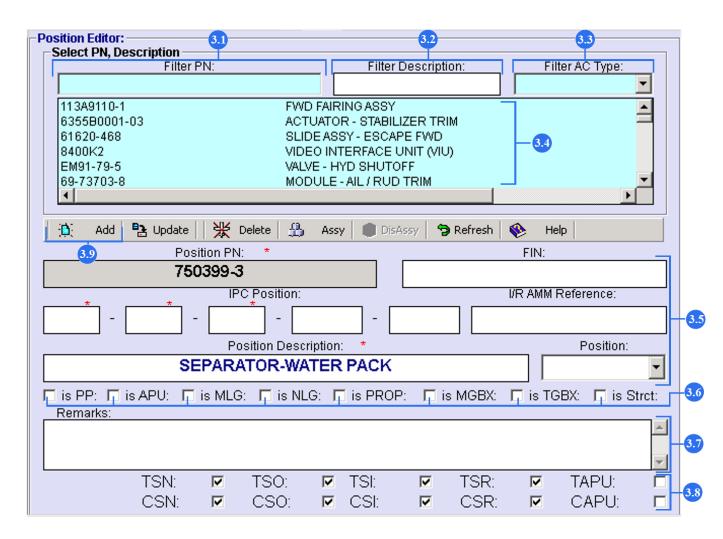

1. To open AMP position structure screen, click on the AMP Pos Struct.

Editor for AMP Pos Struct screen is divided on two part: "Part Effectivity Editor (for Selected IPC position)" (item # 2) and "Position Editor" (item #3).

Turn to the item #3.

3.1. To add a new component into the structure you should find it from the whole list (see item 3.4) using "Filter PN".

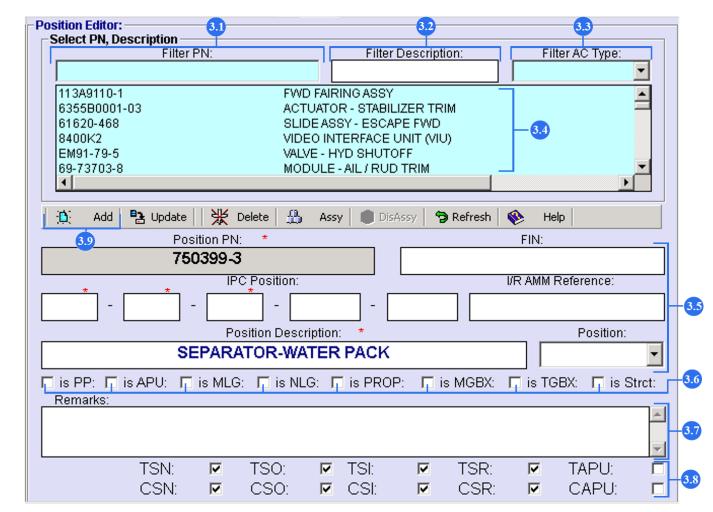

3.2. Also, you can use "Filter Description" to find new component.

3.3. "Filter AC Type" can help to look for new component.

3.4. The list of all these components is a database of components with their part numbers and descriptions, which are automatically taken from the "Material Management" sub module of Part – M module. Highlight and click two times on the suitable components part number.

If you can't find the part number of the component, you must enter component data in "Material Management" sub module and save this information. Then you can use filters 3.1, 3.2, or 3.3 again to look for corresponding part number of the component and add it to the structure.

3.5. Position P/N and Description will be automatically displayed.

Type an IPC Position.

Use "FIN" field and "I/R AMM Reference" field to enter auxiliary information, where FIN – functional item number.

I/R - installation and removal.

Also don't remember to select component position.

3.6. Select a component (ASSY) by ticking one of the fields, where:

-PP is Power Plant;

-APU is Auxiliary Power Unit;

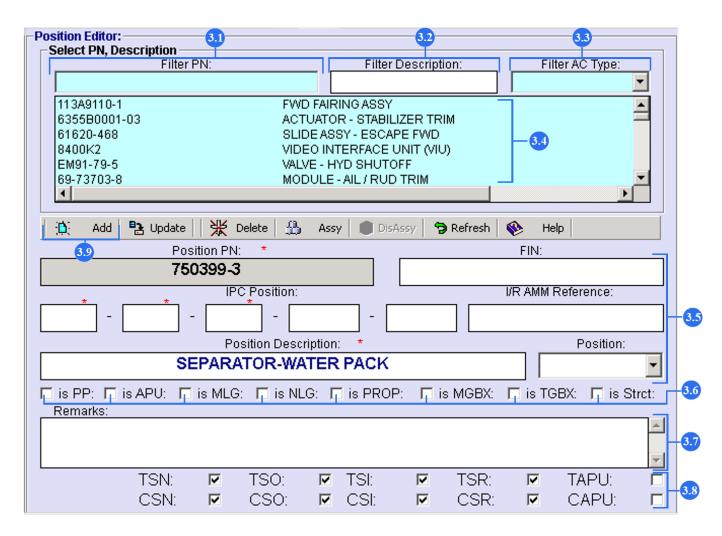

- MLG is Main Landing Gear;

- NLG is Nose Landing Gear;
- PROP is propeller;
- MGBX is Main Gear Box;

- TGB - Tail Gear Box;

- Strct - Structure.

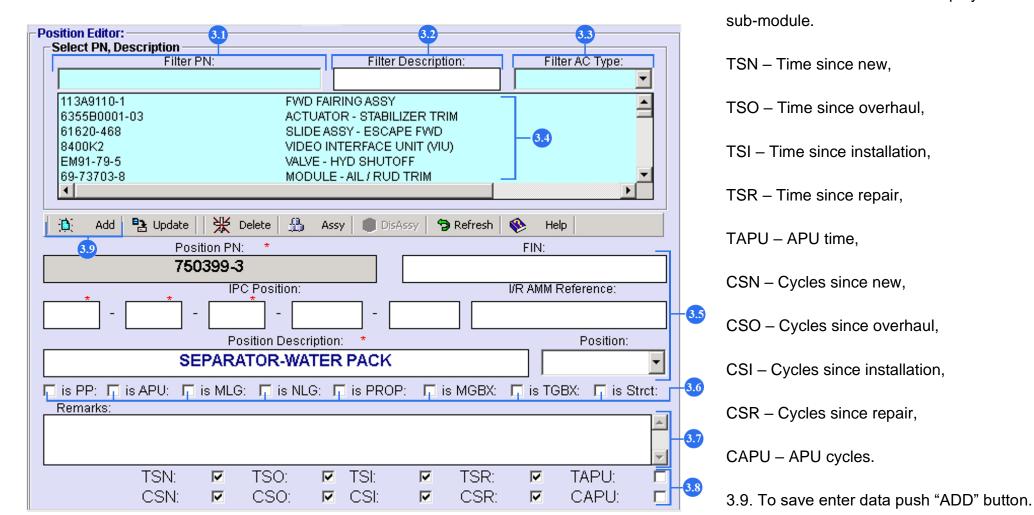

Consider this item on the example of the APU.

APU has its own IPC position. You type the IPC position of the APU accordance to item 3.5. and it is required to tick the APU field. If you type IPC position of the APU bleed valve (for example) it is impossible to tick the APU field, showing affiliation to the APU.

3.7. Type any Remarks. Filled 'Remarks' field will be displayed in an Aircraft Configuration Report.

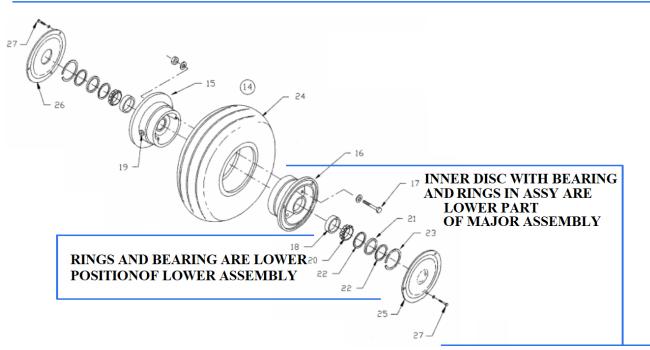

3.8. Tick the fields of component maintenance start time. Selected Times will be displayed in the "Actual" sub-module.

4.2. Overview of Main and Lower Assemblies

EXAMPLE

The program supports three-level structure of IPC position assembly for components registration.

Component structure consists of the following positions:

MLG WHEEL ASSY IS

MAJOR ASSEMBLY

- NA Not an Assembly (single position);
- MA Major Assembly (upper level of Assembly);
- LP Lower Part of Major Assembly (second level of assembly);
- LA Lower Assembly of Major Assembly (second level of assembly);
- LPLA Lower Part of Lower Assembly (third level of assembly).

1. To create assembly it is necessary to operate with Position Editor.

For the instance we will use Flight Data Recorder assembly with Underwater Locator Beacon as lower part of FDR.

1.1. Use Filter PN, Filter Description or Filter AC Type to find FDR.

1.2. From the whole list of the component click two times on the line.

1.3. Position PN will automatically appear. Enter IPC Position.

1.4. If it is necessary enter FIN number and removal/installation reference from AMM.

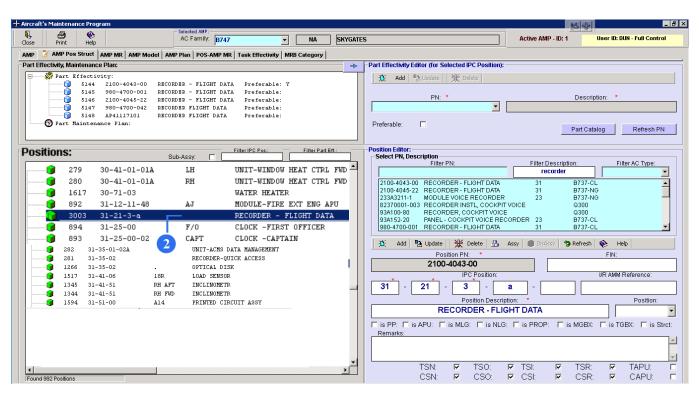

1.5. Enter Position Description (name of the component).

1.6. Use "Remark" field and filters as additional information.

1.7. Tick the fields of component maintenance start time. Selected Times will be displayed in the "Actual" sub-module.

1.8. Push "Add" button to save the component data.

2. You can see created component as a top level position in the list of the Positions screen.

Next step is creation Underwater Locator Transmitter as a lower position of FDR position.

To create assembly, it is necessary to operate with Position Editor.

5. Use Filter IPC Pos to quick find corresponding FDR.

6. Tick "No Assy" field, because DFDR is not assy.

7. Highlight the line.

8. Push "Add" button.

9. Newly specified ULB position will be added. System will create link between selected FDR position and newly added ULB position.

The status of FDR position will be changed from NA – Not an Assembly to MA – Major Assy. The status of ULB position will be saved as LP – Lower Part of Major Assembly.

The view of IPC positions on a screen will change according.

4.4. Substitute Part Number Overview and Registration

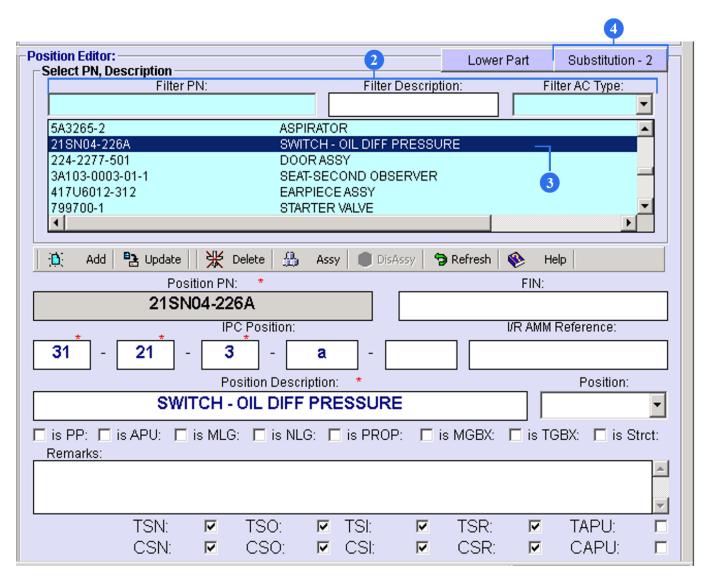

If a selected component has Substitutions registered in the Material Management sub-module, the Substitution button

will be active.

1. To create Substitution it is necessary to operate with Position Editor.

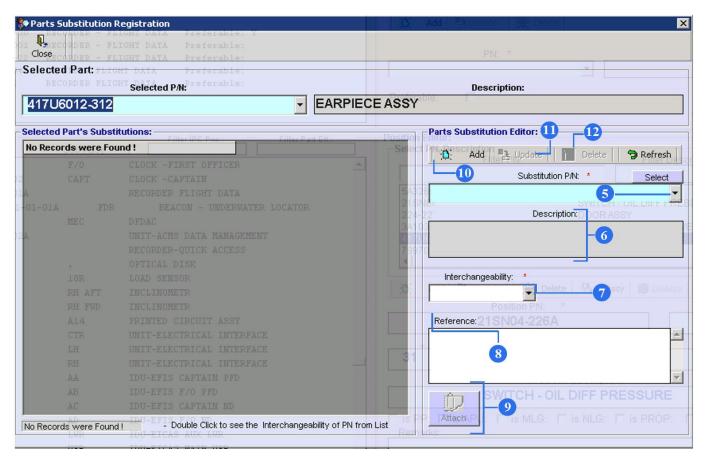

2. Use Filter PN, Filter Description or Filter AC Type to find necessary component with part number.

3. From the whole list of the component highlight the line.

4. Push "Substitution" button.

5. Select a part number from a combo box that you want to register as an alternative one.

Note that both part numbers should be already registered in the system (in the Material Management sub-module).

6. Description will appear automatically.

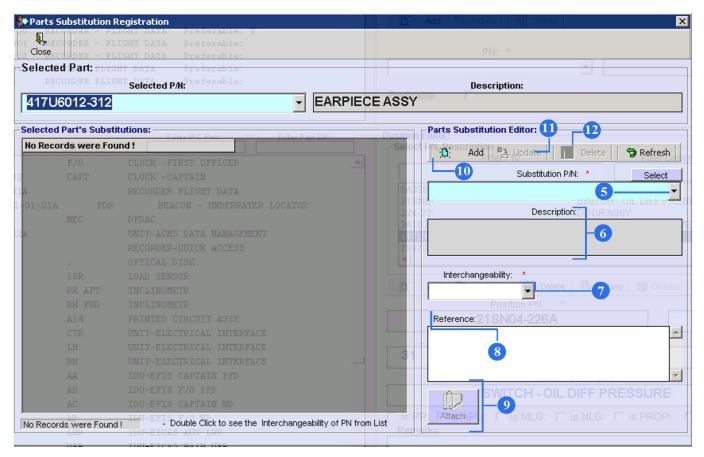

7. Choose a type of Interchangeability.

8. Use the Reference field to enter any references or remarks.

6. If there is cross reference paperwork to attach, press the "Attach" button and add the files.

7. When all necessary fields are filled in, press Add.

8. To update any data, select the part number from the left part of the window, change or add the required information and press the Update button.

 To delete an obsolete or wrong substitute, highlight it from the list of 'Selected Part's Substitutions' and click on the Delete button.

4.5. Part Effectivity Registration

For some IPC Positions it is possible to register other components that can be also effective for a particular position.

		MJO 99-08-10-004
		<u></u>

4. Select a Treatment. Treatment description will appear automatically.

5. To set up a certain interval for repetitive tasks, type FH (flight hours)/ FC (flight cycles).

6. To set up a certain interval for repetitive tasks, type DY (days)/ MO (months)/ YR (years).

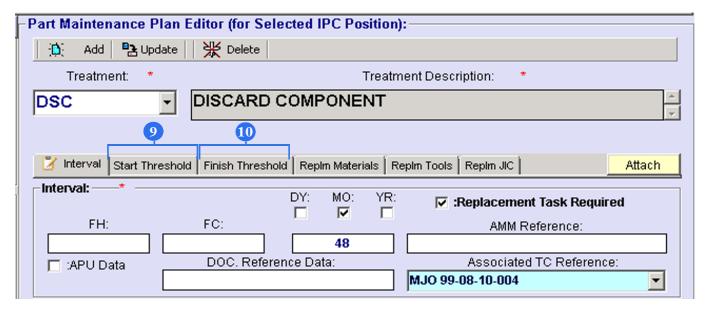

7. If the Treatment must be carried out with Replacements, tick the 'Replacement Task Required' and type an AMM (Aircraft Maintenance Manual) Reference. Select a Replacement Task Card in the 'Associated TC Reference' field. Only tasks marked with 'Completed By Component Replm' in the Maintenance Requirements Editor (Maintenance Plan sub-module) will be displayed.

If treatment of component includes some tasks or EC, you can connect component treatment with tasks/EC. Do these steps:

49. In the "Activated Task Cards or EC" editor use Filter field to enter task or EC. Push Enter button on your keyboard.

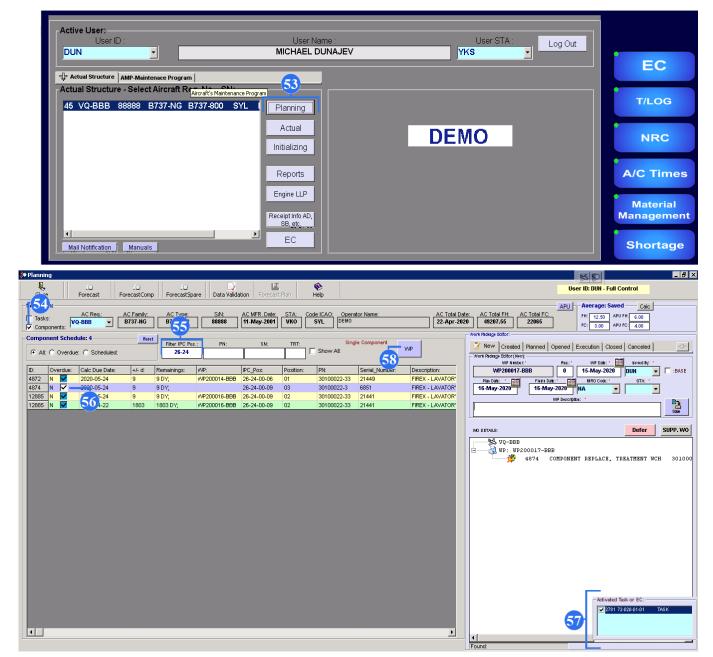

50. Task or EC appear in the window. Check box it.

51. Click Add button.

52. Don't forget to push Update button.

In Planning module all activated tasks or EC will be added to WP, which will be created for component treatment.

53. In the PART M module click on the Planning button.

54. Check box Component field to open Component Schedule screen.

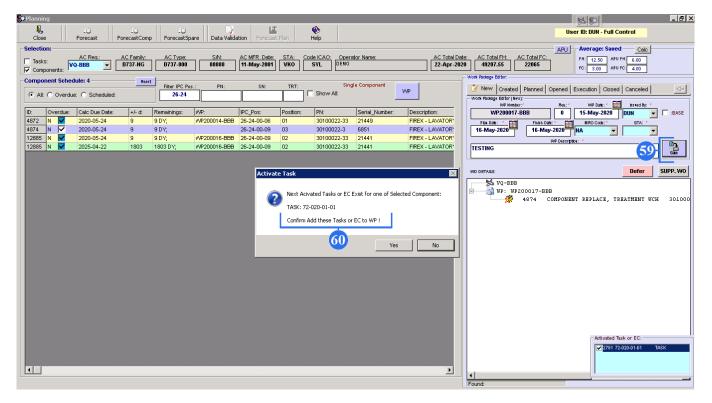

55. Use Filter IPC Pos field to enter IPC position.

56. Check box the line with component.

57. You can see window with activated task.

58. Push WP button.

59. In the WP Editor ("New" tab) enter name of WP and click on the Save.

60. "Activate Task" window will appear.Window suggests to add activated task to WP.Push Yes button.

63. In Actual submodule you can complete WP. In Editor you can complete WO of the task and you can do treatment update of component.

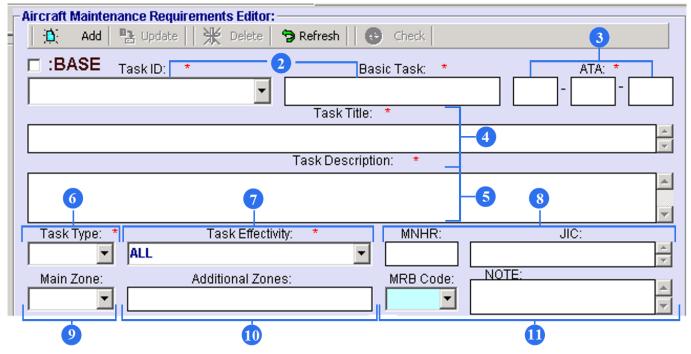

5. AMP Maintenance Requirements

A Maintenance Requirements tab registers and describes all tasks that have to be done and all necessary information about these tasks, such as types, effectivity, intervals, references and etc. All registered tasks are used in further Maintenance Plan Creation. This tab is the same as the Maintenance Requirements in the Maintenance Plan submodule. You can make any changes here, if necessary.

1. To open AMP maintenance requirement screen, click on the AMP MR.

 To create a new task, type your Task ID and a Basic Type, according to a maintenance program document.

3. Enter an ATA Chapter in an appropriate field.

4. Name the task.

5. Write down a short task description.

6. Select a Task Type from a combo box:

CPCP – corrosion prevention task

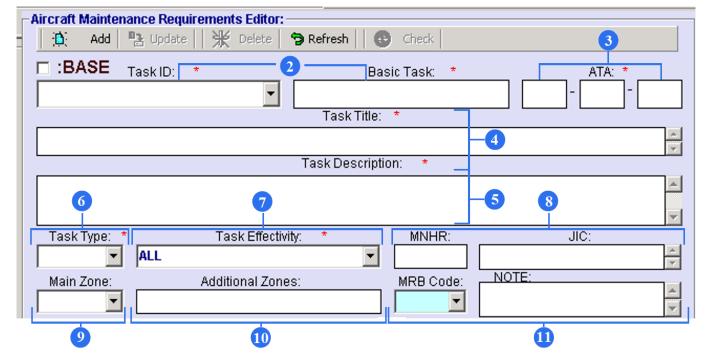

• STRU - structural task

- SYST system task
- ZONA zonal task

7. Select a Task Effectivity from a combo box. Note that Task Effectivity is registered in a Task Effectivity tab.

8. Type MNHR (man-hour) and a JIC number (Job Instruction Card).

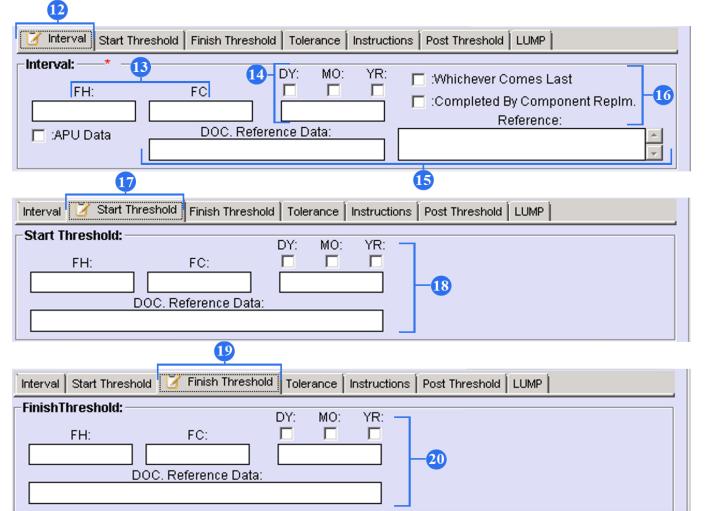

9. Select a Main Zone from a combo box. If there is no required zone in a list, type this zone in the Main Zone field and click on the Update button.

10. Type Additional Zones if necessary.

11. Choose an MRB Code (Maintenance Review Board) and fill out the Note field if necessary. Note that MRB Codes are registered in a MRB Category Codes tab.

12. Click on the Interval tab.

13. To set up a certain interval for repetitive tasks, type FH (flight hours)/ FC (flight cycles)

14. To set up a certain interval for repetitive tasks, type DY (days)/ MO (months)/ YR (years).

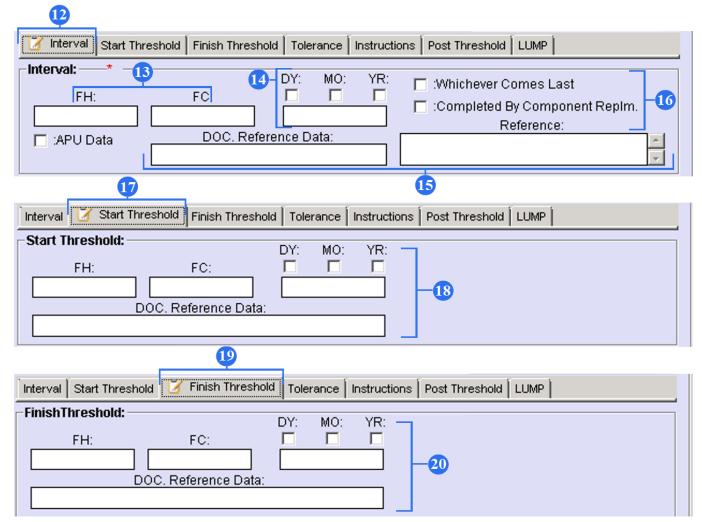

15. Enter document reference data and reference component IPC position if it is necessary.

16. Tick the 'Whichever Comes Last' field if there are several parameters and the task should be repeated only when the last parameter is reached.

Tick the 'Completed By Component Replm' field, if component replacements are required for the task completion.

17. Click on the Start Threshold tab.

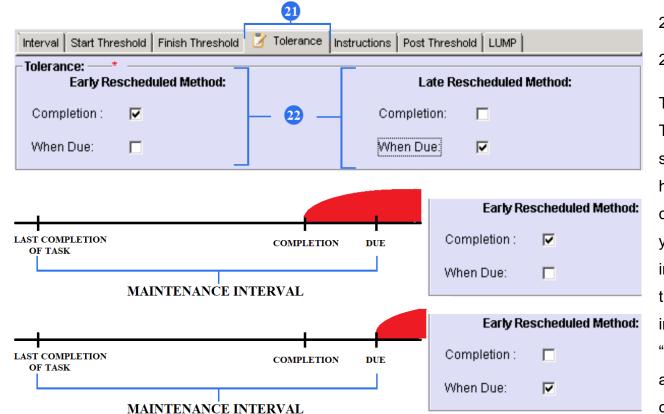

18. To set up a Start Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years). Only when the set parameters are reached, the task starts to be carried out.

19. Click on the Finish Threshold tab.

20. To set up a Finish Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years). Only when the set parameters are reached, the task automatically is ceased.

- 21. Click on the Tolerance tab.
- 22. Set up possible tolerance for repetitive tasks.

The line segment from "LAST COMPLETION OF TASK" to "DUE" is maintenance interval, which is set in "Interval" tab. Maintenance interval shows how often the task is executed. If you decide to complete the task early than maintenance interval, you can show where to read a set maintenance interval. In "Early Rescheduled Method" column tick the "Completion" field. Therefore, the maintenance interval begins to read from "completion". In "Planning" submodule the program will automatically add the value from the "Remaining" column and the value from the "FH Compl" column. In "Early Rescheduled Method" column tick the "When Due" field. Then the task will need to be completed after the "maintenance interval" (from DUE). With the Late Rescheduled Method the same thing is done.

23. Click on the Instructions tab.

24. When a task goes necessarily with instructions, you should mark the required instruction.

25. Click on the Post Threshold tab.

26. To set up a switching interval for repetitive tasks, type FH (flight hours)/ FC (flight cycles), DY (days)/ MO (months)/ YR (years).

27. To set up a post switching interval for repetitive tasks, type FH (flight hours)/ FC (flight cycles), DY (days)/ MO (months)/ YR (years).

28. Push "Save" button to save entered data.

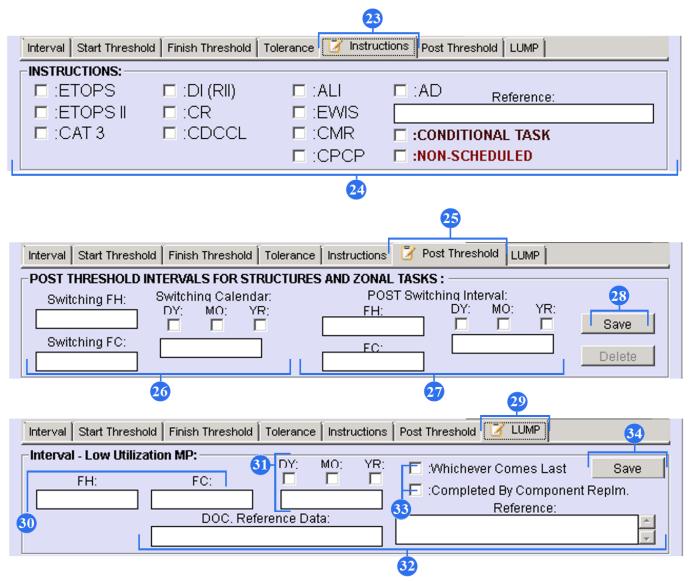

29. Click on the LUMP tab.

30. To set up a low utilization interval for repetitive tasks, type FH (flight hours)/ FC (flight cycles)

31. To set up a low utilization interval for repetitive tasks, type DY (days)/ MO (months)/ YR (years).

32. Enter document reference data and reference component IPC position if it is necessary.

33. Tick the 'Whichever Comes Last' field if there are several parameters and the task should be repeated only when the last parameter is reached.

Tick the 'Completed By Component Replm' field, if component replacements are required for the task completion.

34. Push "Save" button.

If the completing task involves completing other tasks, do these steps.

82. Select the task and highlight it.

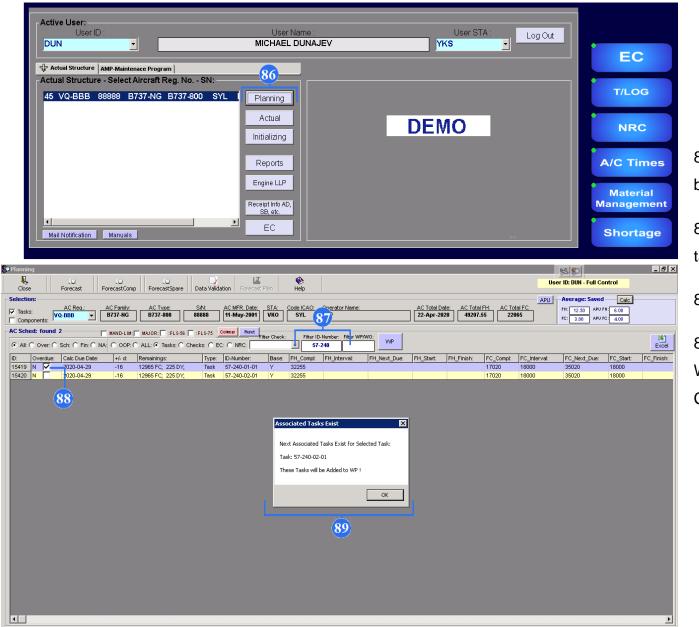

83. In the "Associated Task" editor use Filter field to enter task. Push Enter button on your keyboard.

84. Task appears in the window. Check box it.

85. Click Add button. Don't forget to push Update button in the Editor.

Associated tasks will be added to WP automatically in the Planning submodule.

User Guidance

86. In the PART M module click on the Planning button.

87. Use Filter ID Number field to enter number of task.

88. Check box the line with task.

89. You can see Associated Tasks Exist window.Window suggests to add associated task to WP.Click OK.

If the completing task contains other tasks, do these steps.

93. Select the task and highlight it.

94. In the "Related Task or EC" editor use Filter field to enter task. Push Enter button on your keyboard.

95. Task appears in the window. Check box it.

96. Click Add button. Don't forget to push Update button in the Editor.

Related tasks will be completed in Actual submodule.

PART M REV 1 ISSUE 2 User Guidance

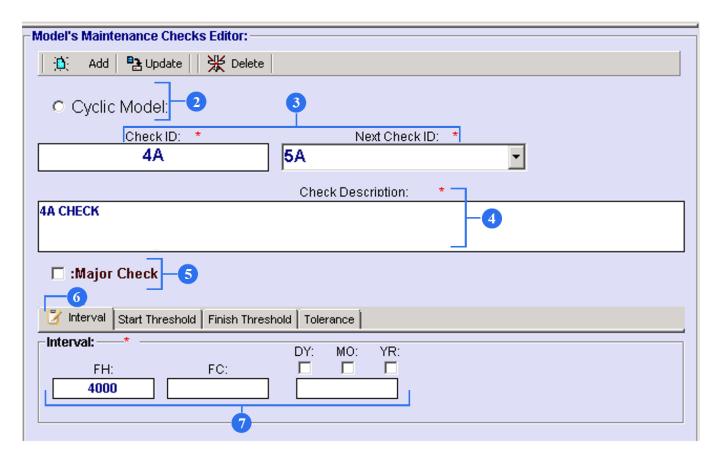

6. AMP Maintenance Model.

This Maintenance Model is used for the distinction of all existing tasks and their future group completion.

1. To open AMP maintenance model screen, click on the AMP Model.

2. The model will be filled by different checks, registered in the Model's Maintenance Checks Editor. If it is cycle model tick the field.

3. Type the Check ID. If it is not a cycle model, type the Next Check ID.

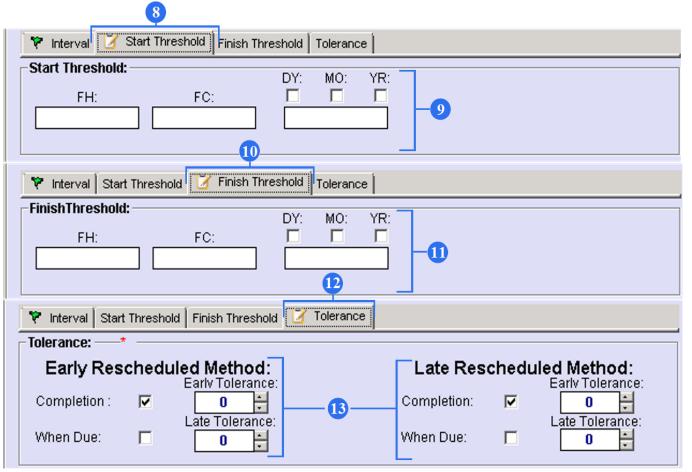

4. Provide a check description.

5. If it is a major check tick the field.

6. Click on the Interval.

7. To set up a certain interval for a repetitive check, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years) in the Interval tab.

8. Click on the Start Threshold.

9. To set up a Start Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years) in the Start Threshold tab. Only when the set parameters are reached, the check starts to be carried out.

10. Click on the Finish Threshold.

11. To set up a Finish Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years) in the Finish Threshold tab. Only when the set parameters are reached, the check automatically is ceased.

12. Click on the Tolerance.

13. Set up possible tolerance for repetitive checks.

- Model's Maintenance Checks Editor:

17. All checks will be generated in a list and can be viewed in detail by clicking on it.

7. AMP Plan

In conformity with the selected Logical Model, a Maintenance Plan will be displayed, where all existing tasks can be distributed according to the Maintenance Model. Here you can add/delete any tasks to the Maintenance Model, if necessary.

14. If you want to view all tasks, unincluded to

any checks yet, select the 'No MP' check box and you will get a list of unincluded tasks.

To see APU tasks tick "APU" field.

15. To transfer data to excel use "Excel" button.

- 16. Use also Maintenance Plan filters:
- Task filter
- Check filter.

17. Push "Interval" button to open Interval Filter editor.

18. Use interval filter to find certain check.

11.Use filters for quick tasks search:

- Task filter
- ATA filter
- •Task Description filter
- Filter Type.

12. Push "Interval" button to open Interval Filter editor.

13. Use interval filter to find certain tasks.

14. If you want to view all tasks, unincluded to

any checks yet, select the 'No MP' check box and you will get a list of unincluded tasks.

To see APU tasks tick "APU" field.

15. To transfer data to excel use "Excel" button.

7. To find a necessary document, use filters:

- Aircraft Family filter
- Aircraft Type filter
- Reference Number filter
- Type filter
- Issued To ... filter
- Issued By... filter
- Title filter

8. Tick the H/Rev (High Revision Date Only) field to view only the latest updated documents; Tick APP(Applicable), NA (Not Applicable) fields to view applicable or not applicable documents to your aviation park. Also, tick the Analyzed/Not Analyzed/Airframe/Component.

9. To view a Receipt Engineering Info Editor again, click on the button with left arrow.

10. Enter a Reference Number, an ATA chapter, who issued and to whom it was issued, a type of the document and check box Airframe or Component.

11. Write down a Title and a Description.

12. Type a Revision Number; select a Revision Date, an Effective Date, MOD Number and MNHR (man-hour).

13. If there is a newly issued document, concerning the same information as the already existing document, this document must be superseded by the new one. To register supersession, use a Supersedes-Superseded editor. In the Filter Reference Number field enter an existing document, and then select the document that supersedes the old document.

3. To find a Engineering Control, use filters:

- Criteria AC Family filter
- Criteria IPC position filter
- Criteria part number filter
- Filter EC number
- Reference number
- ATA filter
- MOD number filter
- EC type filter
- EC title filter

4. Check box MAND or CANC or ALL if you want to see only mandatory EC or cancelled EC or both mandatory and cancelled EC.

5. To view an Engineering Control Editor again, click on the button with left arrow.

6. To create new Engineering Controls for registered Service Bulletins, Airworthiness Directives and other documents, click on the Select button.

7. Choose an Engineering Control Number from the Document Receiption Catalog. If the 'NO EC' field is selected, the list of all registered receipts (in the Receipt Engineering Info tab) for which internal company's documents have not been added yet, will be displayed.

8. Use filters to find a document from the Document Receiption Catalog:

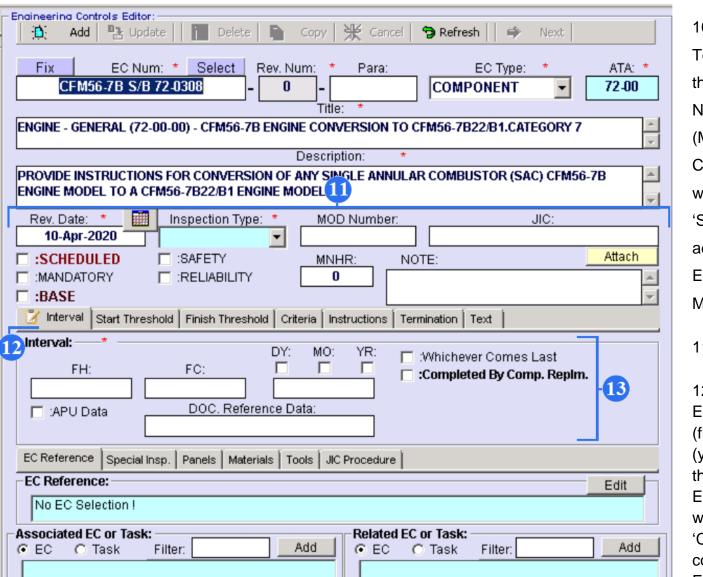

- Aircraft Family filter
- Reference Number filter
- ATA

9. Tick the H/Rev (High Revision Date Only) or No EC (No Engineering Control) to view documents with High Revision Date or without Engineering Control relatively. Also, you can check box NOT APPLICABLE.

10. Push Select button.

PART M REV 1 ISSUE 2

User Guidance

ALASKAR

10. Select an Inspection Type from a combo box. To view the description of abbreviations, press the F1 button. Type date, a MOD (Modification) Number, a JIC (Job Instruction Card), MNHR (Man-hour), and make notes. Select Engineering Control traits (Scheduled/ Mandatory) and on what it effects (Aircraft Safety/ Reliability). If it is 'Scheduled', the document will be automatically added to the INITIALIZANG sub-module. If the Engineering Control should be a part of Base Maintenance, tick the BASE field.

11. Select Interval tab.

12. To set up a certain interval for repetitive Engineering Controls, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years). Tick the 'Whichever Comes Last' field, if there are several parameters and the Engineering Control should be repeated only when the last parameter is reached. Tick the 'Completed By Component Replm' field, if component replacements are required for the Engineering Control completion. Do not forget to make References.

13

Interval Start Threshold Criteria Instructions Termination Text FinishThreshold: 15 DY: MO: YR: FH: FC: Image: Comparison of the text of text	16
Interval Start Threshold Finish Threshold Criteria Instructions Termination Text Criteria: Position Applicability: No EC Selection !	18

13. Select Start Threshold tab.

14. To set up a Start Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years). Choose due date and enter reference data. Only when the set parameters are reached, the Engineering Control starts to be carried out.

15. Select Finish Threshold tab.

16. To set up a Finish Threshold, type FH (flight hours)/ FC (flight cycles) /DY (days)/ MO (months)/ YR (years). Only when the set parameters are reached, the Engineering Control automatically is ceased.

17. Select Criteria tab.

18. Type Position Applicability and click on the Add.

CAL.				

19. Select Instructions tab.

20. When the Engineering Control goes necessarily with instructions, you should mark the required instruction. Also, you can add references.

21. Select Termination tab.

22. Select EC or Tasks that must be terminated and click on the Add. Use filter for search.

- 23. Select Text tab.
- 24. Enter necessary text and click on the Save.

41. To save EC click on the Add. Highlight the saved EC.

42. You can make a change and click on the Update.

43. To remove the EC click on the Delete button.

44. Instead of new EC registration, concerning quite the same information as already existing document, you may copy the information from the existing EC to the new one by clicking Copy. Select necessary items. The copy will be orange in the list and can be easy updated.

45. To confirm cancellation of Selected Document Reference Number push Cancel button.

46. Click on Refresh to reset all entered data.

47. To add EC extra information click on the Next.

48. Type all necessary information in there fields.

49. Click on the Update.

50. Also you can print Engineering Order, or transfer data to excel.

Planning User guidance

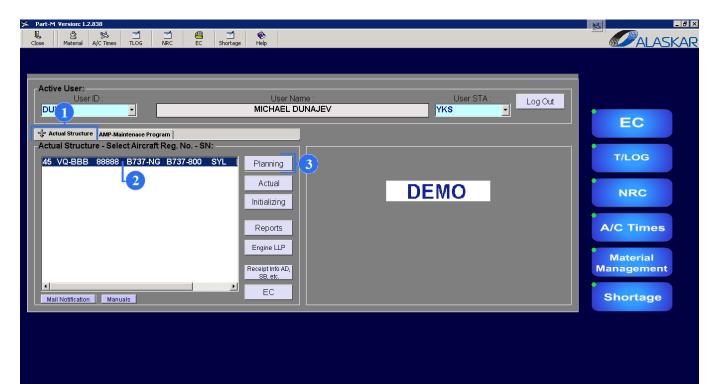

Contents

1. Planning Overview.	. 133
2. Work Package Creation.	. 139
3. Calculation of Average Aircraft Utilization Criteria and Task Editor.	. 149
4. Forecast.	. 154

1. Planning Overview.

To open Planning sub-module in the initial screen of the PART M module do these steps:

- 1. Select "Actual Structure" tab.
- 2. Highlight necessary aircraft registration.
- 3. Push "Planning" button.

Planning screen is divided on three windows.

4. "Selection".

- 5. AC Sched.
- 6. Component Schedules.

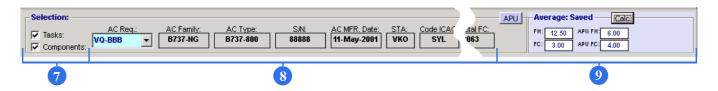

Turn to Selection window.

7. Use "Tasks "filter or "Components" filter to see AC Schedule window or Component Schedule window or both of them at once. Tick in the Task check box opens AC Sched window, tick in the Components check box opens Component Schedule window. And two ticks open AC Shed window and Components Schedule window.

8. You can change aircraft registration without leaving the Planning sub – module. Also, you can see necessary data for corresponding aircraft.

 Average screen is necessary for Calculation of Average Aircraft Utilization Criteria and Task Editor. (see unit 3)

Turn to "AC Sched" window.

After data initializing and transmission to production, this data will be displayed in the Planning sub-module.

10. All items (checks/ NRC/ Tasks/ ECs) are differently coloured:

• red items are overdue;

 yellow items will become overdue soon (less than 21 days); should be performed in the nearest time;

 green items are normal; should not be performed in the nearest time (more than 21 days);

11. It is possible to view an amount of days until the next item (check/ NRC/ Task/ EC) completion in the 'Calculated Due Date'/ '+-days' columns.

12. All items can be separated into appropriate groups by using filters:

"OOP"- Shows Out of Phase (check, tasks, EC, NRC);

'All'-checks/ NRC/ out of check tasks/ ECs are displayed;

'Detail'-checks/ NRC/ all tasks/ ECs are displayed;

'Tasks' –only tasks are displayed;

'Checks' -only checks are displayed;

'EC' -only engineering controls are displayed;

'NRC' -deferred NRC items are displayed.

13. Use filters to view the necessary group of items:

- Overdue items filter;
- Scheduled items filter;
- Finished items filter;

You may use several filters at once (for example, checks + overdue = all overdue checks will be displayed).

Work Package (WP) consists of one or several Work Order(s) (WO), which is automatically assigned for each item (check/ NRC/ Task/ EC). After WP creation, it will be performed in the Actual sub-module gradually, item by item, and its active status will be displayed in the Work Package Editor also.

1. From the whole list tick items that will be added to a Work Package in a list of work orders.

2. Push WP button to open editor.

24. Click on the Created tab.

25. From the whole list find corresponding work package. Highlight it.

26. Make a change if necessary, in Work Package Editor New.

27. Click on the Save.

28. It is possible to add new items in the already created work package. Tick items that will be added to the created Work Package in a list of work orders.

29. Push ADD button.

30. If there is need to put off any items of created work package, highlight corresponding line and click on the red Defer button to open Deferral Editor. Also, you may add a Supplementary Work Order

31. To transfer the WP to a 'Planned' tab, click on the Planned button.

40. When you submit the Work Package to execution by clicking on Executed, it will be transferred to the Actual sub-module (view 40.1).

41. From the whole list find corresponding work package. Highlight it.

42. In the Execution tab there is possible to make changes/ to add new items/ and etc in already registered Work Packages.

43. You can back WP to Opened tab if you push Back Open button.

44. After working with the WP in the Actual submodule, status of work package can be supervised in the Closed/ Cancelled tabs. All these Work Packages can be only printed by clicking on Print.

45. All items, submitted to the Actual submodule, will be market with tick in the list of items.

1. All dates of tasks completion are calculated in accordance with Average Aircraft Utilization Criteria, except APU tasks. Data is taken from the Aircraft Times sub-module by default. To view Installed APU Data, click on APU button. To open an 'Average Aircraft Utilization Criteria' Editor, click on CALC button.

2. If you need to view next due dates, taking into account the other average aircraft utilization criteria, complete the following steps:

- select an amount of months (1/ 2/ 3/ 6/ 9/ 12);
- click on, and the system calculated average flight hours and cycles;
- select the 'Apply Calculated AVG' check box, and then click on. All next due dates will be recalculated in accordance with the selected criteria.

3. You may also set up fixed average flight hours and cycles, then select the 'Apply Fixed AVG' check box, and click on. All next due dates will be recalculated in accordance with the set average flight hours and cycles.

4. All listed tasks can be updated in an Actual Task Editor. For its opening, select an item's check box and right-click the task.

5. If it is necessary remove WP or add JIC or select shortage number.

Also, you can enter Materials and Tools.
 Click on the edit button.

7. You can attach necessary files by clicking on yellow Attach.

8. You can change completion dates (FHs)/ next due dates (FHs) and set up intervals.

9. Select a 'Terminate' check box, if the task completion should be finished, but still be available for its returning back anytime. After termination, the task will be displayed in the 'Finished' Aircraft Schedule. This option is usually used for seasonal tasks and others. Select a 'Not Effective' check box, if the task is not effective; after this action, the task cannot be returned back. Select "Superseded" and task will be closed in Planning.

10. Click on the Update to save changes.

A Forecast Option allows monitoring all tasks that should be performed within a particular period of time, unlike a list of tasks that displays only the next due date of a particular task.

 On the upper toolbar select "Forecast", "Forecast Comp" or "ForecastSpare" and corresponding windows will be opened.

When you click on the Forecast tab in the upper toolbar Forecast Planning screen with tasks opens.

2. Select a period of time:

- 2 weeks;
- 1 month;
- 2 months;
- 3 months;
- 6 months;
- 1 year;

3. There are several filters available:

'All' –checks/ NRC/ out of check tasks/ ECs are displayed;

'Tasks' – only tasks are displayed;

'Checks' -only checks are displayed;

'EC' -only engineering controls are displayed;

'NRC' -deferred NRC items are displayed;

4. Use 'ID Number' and 'Aircraft Registration' filters.

8. There are several filters available:

'All' –checks/ NRC/ out of check tasks/ ECs are displayed;

'Tasks' – only for tasks are displayed;

'Checks' –only for checks are displayed;

'EC' –only for engineering controls are displayed;

'NRC' –only for deferred NRC items are displayed;

9. Use 'ID Number' and 'Aircraft Registration' filters.

Actual User guidance

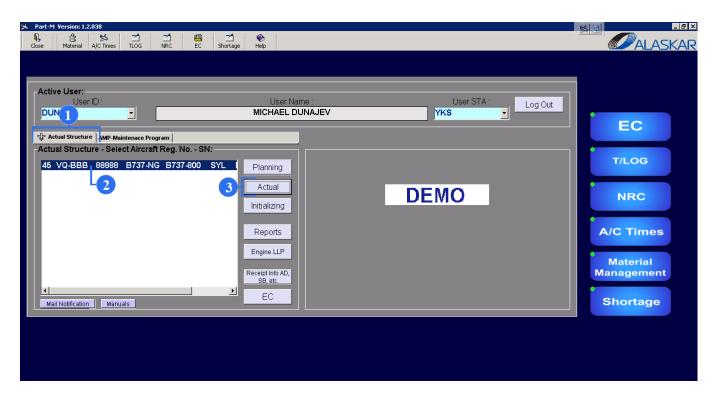

Contents

1. Actual Overview and Work Packages Completion	160
2. Additional Work Order & Deferred Task Cards	164
3. Components Replacement Completion	168
4. Components tab	171
5. Actual Engineering Controls	176

1. Actual Overview and Work Packages Completion

An Actual sub-module displays all actual data taken from the Initializing sub-module (not hardtime Engineering Controls and Component Position Structure), as well as provides completion of work packages/work orders, submitted to execution in the Planning submodule

To open Actual sub-module in the initial screen of the PART M module do these steps:

- 1. Select "Actual Structure" tab.
- 2. Highlight necessary aircraft registration.
- 3. Push "Actual" button.

9. Select a Completion Date, Man-Hours/ Minutes, a Mechanic ID and Action Note..

10. It is possible to attach any references to the Work Order by clicking on Attach.

11. To complete the Work Order, click on Comply button.

12. All completed items turn from green to grey in the list.

13. When all Work Orders, constituting the Work Package, are completed, the Work Package can be submitted to completion by clicking on "Compl WP" button.

14. To finish the completion, fill out all required fields (T/Log Number, Remarks, Compl Date, Compl FH/FC) in the 'WO Completion Data' editor.

15. Click on the "Confirm". The WP will not be displayed any more.

16. To close the fully completed Work Package, click on the "Close WP" button. (T/Log can be 'NA'). To cancel any Work Packages, click on "Cancel WP". After cancelation, WPs are inactive in the system.

2. Additional Work Order & Deferred Task Cards

USE SUPPLEMENTARY AMM	1	<u>^</u>		
		_		

WO number will be automatically generated.
 Enter ATA chapter. If it is necessary check box
 RII (Required Inspection Item) and ARA
 (Additional Repair Agreement).

3. Fill out Task – Title, Complaint Note. You can if necessary, enter part number and serial number.

4. Fill out Recommendation.

5. Click on the Add button to save.

6. In the upper side Additional Work Order Editor the save will be appeared. Highlight the line.

7. Make a change if necessary, and click on the Update.

8. To remove created supplementary WO, click on the Delete.

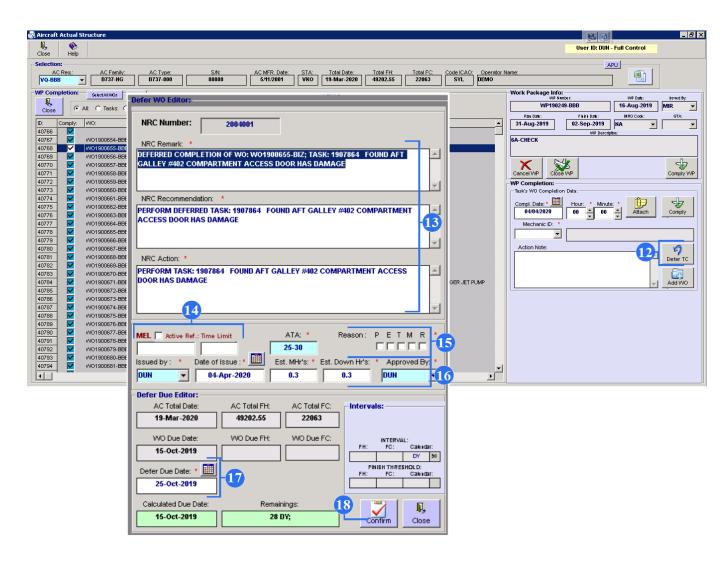

9. To reset all data, click on the Refresh.

10.To close Editor, push Close button.

11. To complete an additional Work Order,

select a Completion Date, Man-Hours/ Minutes, a Mechanic ID; and click on Comply button.

12. If due to some reasons a selected task cannot be completed right now, it is possible to defer its completion by clicking on "Defer TC". Automatically the system will register a new NRC (non-routine card) for a deferred task, it is orange in the list.

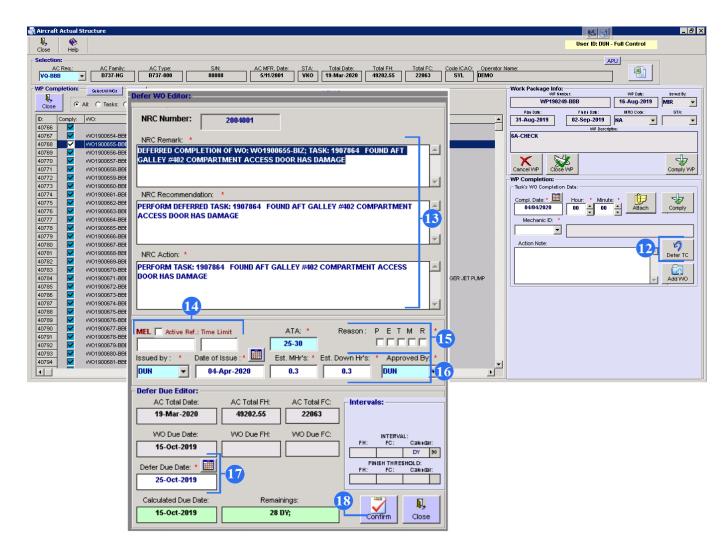

5. NRC Remark, Recommendation and Action will be automatically entered and can be changed, if necessary.

6. Make references to MEL (a Minimum Equipment List) with its category.

7. Select reasons of the deferment:

- P-pilot remark
- E-lack of equipment
- T-lack of time
- M-lack of materials
- R-lack of recourses

8. Write down estimated man hours (Est. MHr's), estimated down hours (Est. Down Hr's), a man, who issues and approves (Issued by/ Approved by).

9. Information in the Deferred WO Editor will be displayed automatically and cannot be changed, except the 'Defer Due FH' filed (it is calculated as 'WO Due FH' + 50 FH by default).

10. To save the deferment, click on, and the new NRC will be transferred to a Planning sub-module ('DEF' Items).

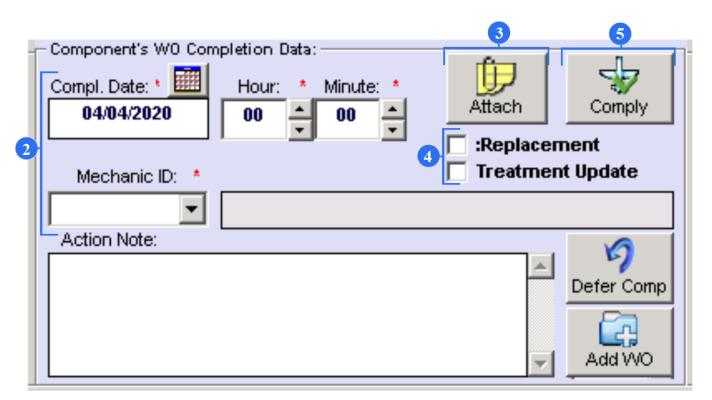

3. Components Replacement Completion

1. WP Components List displays all components with replacement, transferred to Work Order in the Planning sub-module from the 'Component Schedule' on the bottom. To register replacement completion, select component's check box in the list and work with it in the Editor.

2. Select a Completion Date, Man-Hours/ Minutes, a Mechanic ID.

3. It is possible to attach any references to the Work Order by clicking on Attach button.

4. Select the 'Replacement' check box, when a replacement should be done. After clicking on Comply, a 'Component Replacement Registration' Editor opens. If you view already registered component replacement, information note emerges: **"Component Replacement Done".** Also, you can select "Treatment Update" check box, when treatment should be done.

5. Click on the "Comply".

			Save Install

6. To remove a component, highlight it in the Positions window.

7. If it is necessary to supplement data, you can done it.

- 8. After click on the Update.
- 9. Then push Remove button.

10. To install the component, highlight it in the Positions window.

- 11. Supplement editor by data.
- 12. After click on the Save.
- 13. Then push Remove button.

Close the window and click again Comply button. (item 5)

1. In the Aircraft Actual Structure screen select Components tab.

2. If some mistakes were made in the Initializing sub-module, they can be corrected here. To open an editor, right click a component. Additional data is also displayed:

- Time (Cycles) Since Installation/ New/ Overhaul/ Repair
- Treatments.

3. Data in the Actual Component Editor will be the same as in the Component Position Initializing tab (the Initializing sub-module).

4. To save updated information, click on the Save.

5. To exit the Editor, click on the Close.

6. To view component's treatment, highlight

it:

- green –treatment completion is not overdue;
- red-treatment completion is overdue.
- 7. Use filters for component search:
 - IPC Position filter
 - Part Number filter
 - Serial Number filter
 - Part Number Description filter
 - Sub-Assy
 - Removed
 - Unsch
 - Robbed

When 'Sub-Assy' check box is selected, applying filters display sub-components also; When 'Sub-Assy' check box is not selected, applying filters display main assembly's components. "Removed" field is for history info, "Unsch" field applies to removed (unscheduled) components and "Robbed" field applies to removed (robbed) components.

8. Two components can be swapped on each other's positions, passing through quick registration. Only components, having the one sub-components or without any, can be changed. Highlight a component.

9. Click on the SWAP button.

10. The system automatically generates an interchange component. The component can be from other aircraft also.

11. Click on "Confirm" to save the swapping.

12. Highlight again any line.

13. Push Print button to print data of the component.

14. Click on the "Removal".

15. To remove the component, highlight it in the Positions window.

- 16. Supplement editor by data if necessary.
- 17. After click on the Update.
- 18. Then push Remove button.

1. In the Aircraft Actual Structure screen select "EC-Engineering Orders" tab.

2. The displayed Engineering Controls are taken from the Initializing sub-module (the EC initializing tab). If some mistakes were made in the Initializing sub-module, they can be corrected here. To open an editor, right click an Engineering Control. Additional data is also displayed:

- IPC Position
- Part Number
- Repetitive Interval
- green –completion is not overdue
- red-completion is overdue

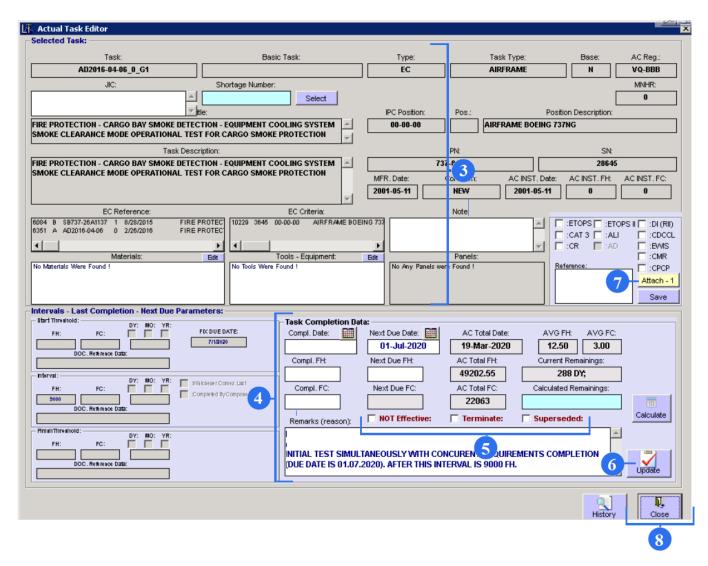

3. Data in the Actual Task Editor will be automatically generated from the EC submodule (this data cannot be changed-all fields are grey-coloured) and from the EC Initializing tab (the Initializing sub-module).

4. In case of incorrect data input in the EC Initializing Editor, all mistakes can be corrected in the Task Completion Data. You can also set up completion dates(FHs)/ next due dates (FHs)for not effective ECs.

5. Select a 'Terminate' check box, if the EC completion should be finished, but still be available for its returning back anytime. After termination, the EC will be displayed in the 'Finished' Aircraft Schedule (the Planning sub-module). This option is usually used for seasonal ECs and others. Select a 'Not Effective' check box, if the EC is not effective; after this action, the EC cannot be returned back. Select "Superseded" check box and task will be closed in Planning.

6. To save updated information, click on Update.

7. It is also possible to attach any documents by clicking on Attach.

8. To exit the Editor, click on Close.

4. Component's Position Initializing	. 194
4.1. Treatments Initializing.	. 199
5. EC Initializing	. 202

1. General Information

After an Aircraft Maintenance Program creation, that contains a Maintenance Plan with all tasks and their completion intervals, it should be filled in by the actual data (the last task completion, its date/ flight hours and cycles). After all data input and task initializing, the tasks will be transmitted to production (a Planning sub-Module).

To begin to work with Initializing submodule:

1. Highlight the corresponding type of aircraft.

2. Push on the "Initializing" button.

The user's manual consists of five sections: Aircraft Initializing, Checks Initializing, Component's Position Initializing, Treatments Initializing and EC Initializing.

After an Aircraft Maintenance Program creation, that contains a Maintenance Plan with all tasks and their completion intervals, it should be filled in by the actual data (the last task completion, its date/ flight hours and cycles). After all data input and task initializing, the tasks will be transmitted to production (a Planning sub-Module).

Checks Initializing tab allows initializing aircraft checks in accordance with the selected AMP, Maintenance Model. The process is quite the same as tasks initializing. After all actual data input and checks initializing, the checks will be transmitted to production (a Planning sub-Module).

Component Position Initializing tab allows initializing all aircraft components, including hard-time components, that constitute the selected Aircraft Maintenance Program (AMP) After the process of initialization, all components (hard-time and not hard-time) will be transferred to the Planning sub- Module and to the Actual sub-Module.

Engineering Controls Initializing tab allows initializing ECs. The process is quite the same as tasks initializing. After all actual data input and ECs initializing, the hard-time ECs will be transmitted to production (a Planning sub-Module), not hard-time ECs will be transferred to an Actual sub-Module.

2. Aircraft's Initializing

IF YOU SELECT CHECK VIEW

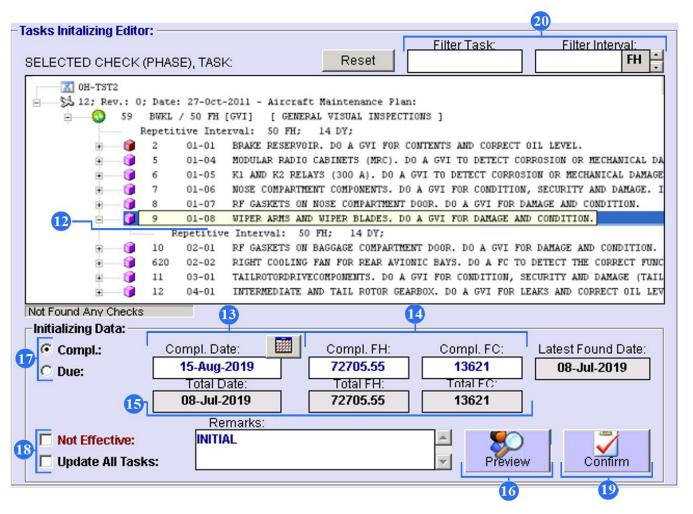

8. To transfer necessary tasks to Task Initializing Editor highlight the task.

9. Push on the button with a tick to the right.

10. The corresponding task will appear in the Tasks Initializing Editor.

11. To turn back the task highlight it in the editor and push on the button with tick to the left.

12. Select tasks' check boxes and provide actual data for each task in the Initializing Data Editor. The Task Initializing Editor displays the Maintenance Plan.

13. Enter the last date of task completion.

14. Input an amount of Flight Hours/ Cycles of the last task execution.

15. Total Date/ Total Aircraft Flight Hours and Cycles will be entered by default (the information is taken from the AC Times sub module).

16. If you want to view date/intervals of the next time of task completion, select the task from the list on the left side of the screen and click on the "Preview" button.

Select type of the model (Cycle or Phase).
 Check ID will automatically appear. If it is necessary enter description.

4. "Interval", "Start Threshold", "Finish Threshold", "Tolerance" tabs are automatically filled. This data is taken from the AMP submodule.

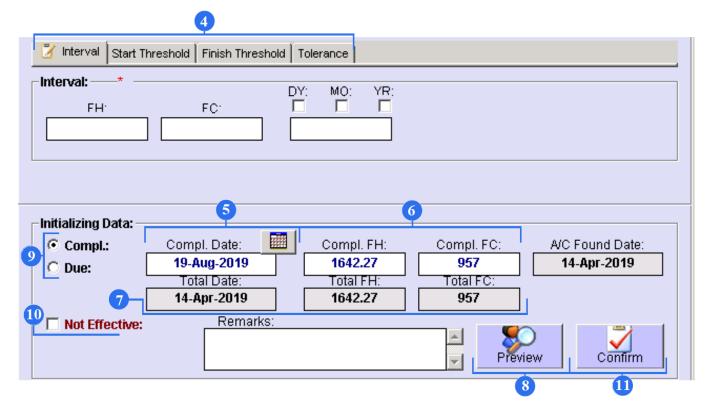

5. Enter the last date of task completion.

6. Input an amount of Flight Hours/ Cycles of the last task execution.

7. Total Date/ Total Aircraft Flight Hours and Cycles will be entered by default (the information is taken from the AC Times sub module).

8. If you want to view date/intervals of the next time of check completion, select the check from the list on the left side of the screen and click on the "Preview" button.

9. If a date of the last check completion is unknown, it is possible to appoint a date of the next check completion. For this action select the 'Due' check box and enter a date/FH/FC of the next check completion.

10. If some checks are not effective for the aircraft, select the 'Not Effective' check box.

11. Click on the "Confirm" to save the data.

4. Component's Position Initializing

Component Position Initializing tab allows initializing all aircraft components, including hard-time components, that constitute the selected Aircraft Maintenance Program (AMP) After the process of initialization, all components (hard-time and not hard-time) will be transferred to the Planning sub- Module and to the Actual sub-Module.

4	

4. On the Component Initializing Editor selected component will be displayed.

Highlight the line.

5. In the Initializing Data editor enter the component installation date.

6. Input an amount of aircraft Flight Hours/ Cycles at the moment of installation.

7. Total Date/ Total Aircraft Flight Hours and Cycles will be entered by default (the information taken from the AC Times sub-module).

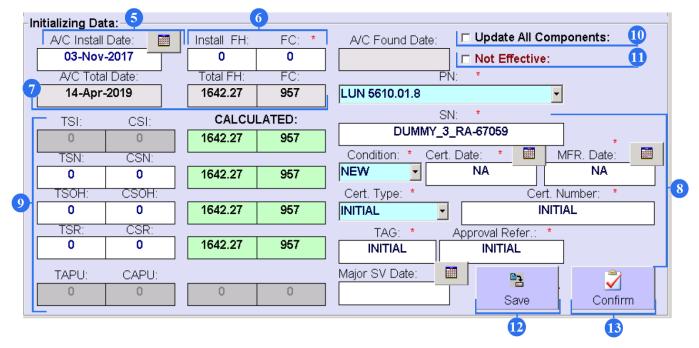

8. Enter a component Serial Number, component Condition, a Certificate Type and Certification/Manufacture Dates, a Certificate Number, Tag and an Approval Reference.

9. Enter TSN/CSN, TSOH/CSOH, TSR/CSR.

The System will atomically calculate current times of the component.

10. If you work with a component that includes several sub-components, you can initialize the whole multiplex component without input data for each component by selecting the 'Update All Components' check box.

11. Select the 'Not Effective' check box, if the component is not applicable to the aircraft.

12. To save all data, click on the Save button.

13. To transmit the component to production, click on Confirm button.

1. Treatments of hard-time components should be also filled by actual data. Click on the 'Maintenance Plan' to open a Treatment Data Editor.

Found 8 Positions

2. The installation date, Flight Hours/ Cycles at the moment of installation, Time/Cycles Since New (TSN/CSN) will be the same as in the Initializing Data editor.

3. Type the TSLC/CSLC and Completion Date.

4. Interval fields are taken from the Aircraft Maintenance Program.

5. Time of the next treatments will be calculated by the system automatically.

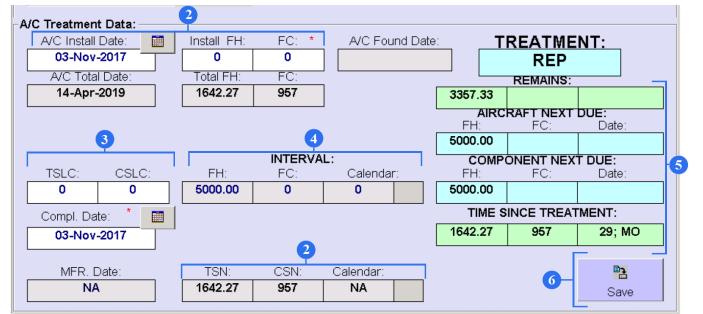

You can view the next time of aircraft treatment in the 'Aircraft Next Due' field.

FH = Total FH + FH Interval;

To view the next time of component treatment in the 'Component Next Due' field.

FH = TSN (time since new) + FH Interval;

Or, in case of having the last completion date:

FH = TSLC (time since last completion) + FH Interval.

'Time Since Treatment' field calculated in the following way:

FH: Total FH - Installation FH

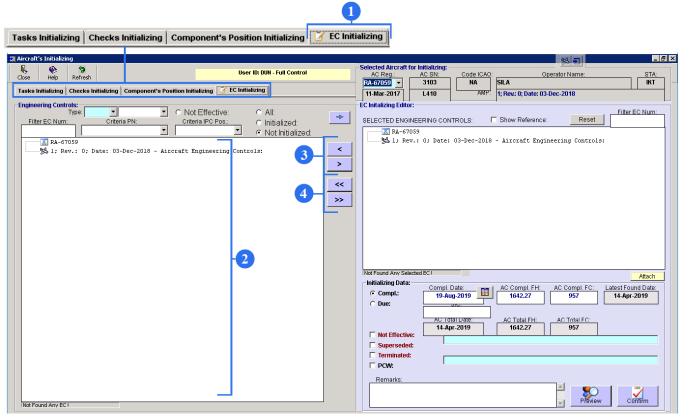

Date: Total Date (or Today's Date) – Completion Date

If some fields turn red, it means that some data was entered incorrectly. Check an amount of flight hours/cycles and dates.

6. To save all data, click on Save button. After that, the component turns blue.

5. EC Initializing

- 1. To open Engineering Controls screen push on the EC Initializing.
- 2. Select a check from the list of Engineering Controls

3. Click on the button with one needle to right to add the EC to the editor. If you want to transfer back, click on the button with one needle to the left.

4. To add all ECs, use buttons with double needle to left and to right.

5. In the EC Initialization Editor enter the last date of EC execution.

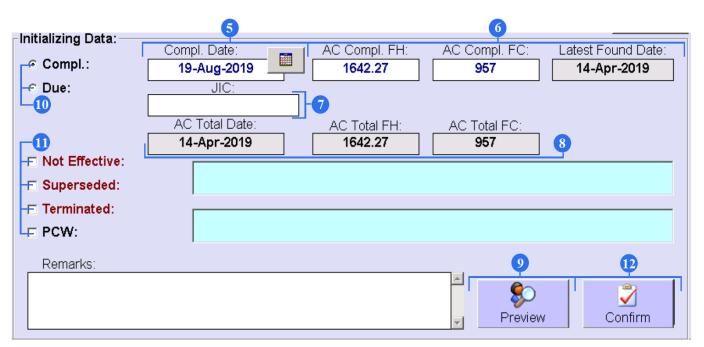

6. Input an amount of Flight Hours/ Cycles of the last EC execution.

7. Enter JIC, if it is necessary.

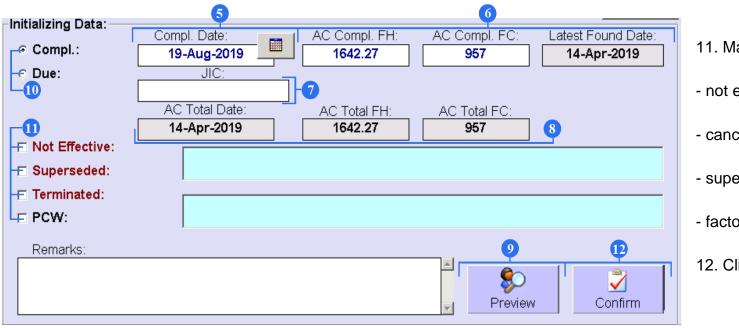

8. Total Date/ Total Aircraft Flight Hours and Cycles will be entered by default (the information taken from the AC Times sub-module).

9. If you want to view date/intervals of the next EC completion, highlight it and click on the "Preview".

10. If a date of the last task completion is unknown, it is possible to appoint a date of the next task completion. For this action select the 'Due' check box and enter a date/FH/FC of the next task completion. Overdue ECs will be redcoloured in the 'Task Initializing Preview' editor and should be executed urgently.

- 11. Make remarks and select criteria of the EC:
- not effective
- cancelled
- superseded
- factory complied.
- 12. Click on the "Confirm" data to save data.

e	Receipt Info AD, SB, etc.		1 Material Management
Mail Notification			Shortage

A Material Management module is made for registration of engineering materials for their further receiving to stores.

This submodule consists of 8 tabs: Spare Catalog, Shipping Agent, Supplier, Shop, Stock Account, Treatment, Delivery Address and Manufacture.

A Spare Parts Catalog is used for a Position Structure creation in the Aircraft Maintenance Program (AMP).

Before creating the Spare Parts Catalog, other tabs (Supplier, Shop, etc) must be fill out, because then, added information will be displayed in a Spare Parts Catalog Editor.

1. To open submodule click on the Material Management button.

2. Spare Parts Catalog

2. Fill in the part number and description.

3. You should always stick the "Individual" check box for components. (only components)

4. Mark the PMA check box if the component is not original.

5. Mark the Dangerous check box if the component is dangerous goods (this is necessary during transportation)

6. If it is necessary select Supplier Code and Shop Code. Lists of the Supplier Code and Shop Code are registrated in Supplier tab and Shop tab.

7. Select Purchase Unit and Store Unit. If purchase and store units are different, enter the converting value. Select type of material.

8. Select an Aircraft type, a Manufacturer (MFG) Code and a correct Stock Account Number (names of premises in which spare parts are stored) from combo boxes. Also, you can enter package size and country of origin.

9. Fill in the remaining fields if it is necessary information. Here all the fields are not under the asterisk. This means that they are not required. But the data in these fields can be used in other submodules.

For example, "Restriction To Use" field.

The information in the "Restriction To Use" field will be displayed in the "Shortage" submodule when creating an shortage item and in the "Purchasing" submodule when creating a PO Item in the form of a Warning window.

10. Click on the Add button.

11. After pressing the "Add" button you can see new spare part in "Spar Parts Catalog" screen.Highlight the line.

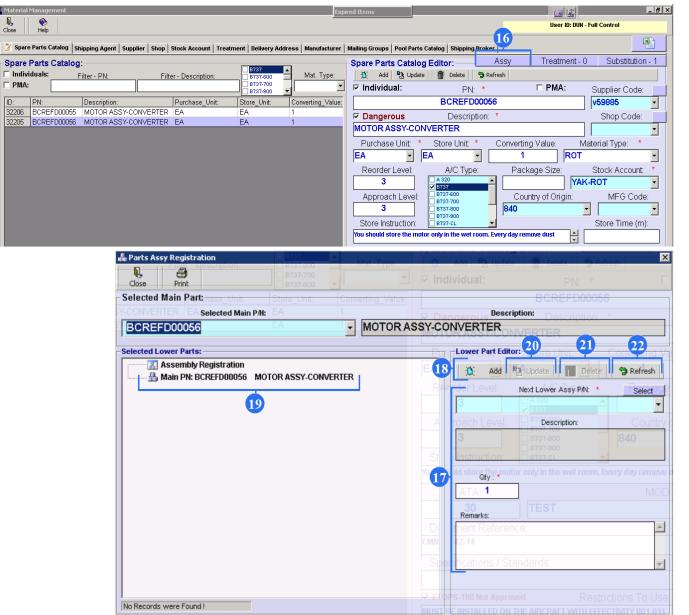

12. In the Spare Parts Catalog Editor make a change and click on the Update button.

13. To remove the new entered spare part click on the Delete.

14. To reset all entered data in the editor push Refresh button.

15. Use these filters to find new entered component quickly.

16. If you want to show the component has lower part of major assembly (second level of assembly) click on the Assy button. Part Assy Registration screen will be opened.

17. Select the next lower assy part number. Description will be appeared automatically. Enter quantity. If it is necessary fill in Remark.

18. To save the data click on the Add button.

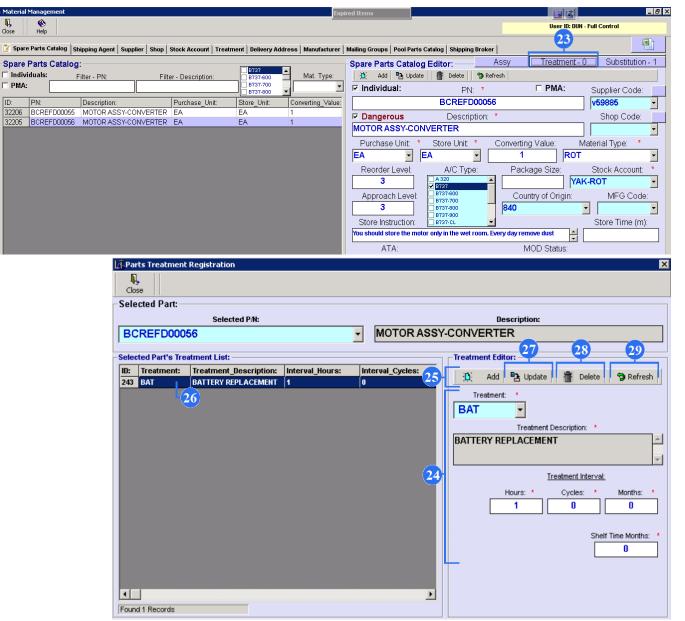

19. In the left window you can see lower assy part number. Highlight it.

20. In the Lower Part Editor make a change and click on the Update.

21. To remove the save lower part push Delete button.

22. To reset all entered data click on the Refresh.

23. If you want to provide treatment of the components click on the Treatment button. Part Treatment Registration screen will be opened.

24. In the treatment editor select of the Treatment Code. Treatment description will be automatically appeared. Fill out treatment interval.

25. To save entered data click on the Add.

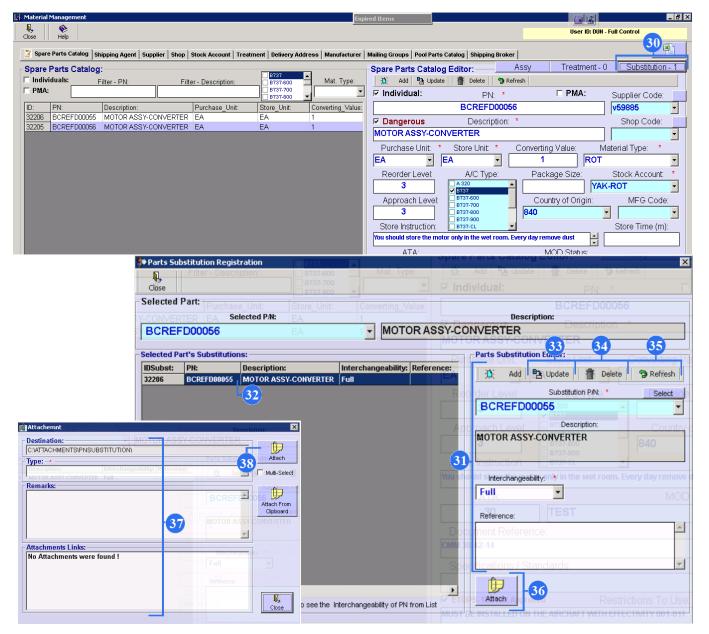

26. You can see save treatment in the Selected Part's Treatment List. Highlight the line.

27. Make a change in the Treatment Editor and push Update button.

28. To remove the highlight line click on the Delete button.

29. To reset entered data click on the Refresh button.

30. To show component interchangeability pushSubstitution button. Parts SubstitutionRegistration screen will be appeared.

31. In the Parts Substitution Editor select substitution part number. Description will be automatically appeared. Select Interchangeability (Full, one way or NHA). If it is necessary fill out Reference field. To save entered data click on the Add.

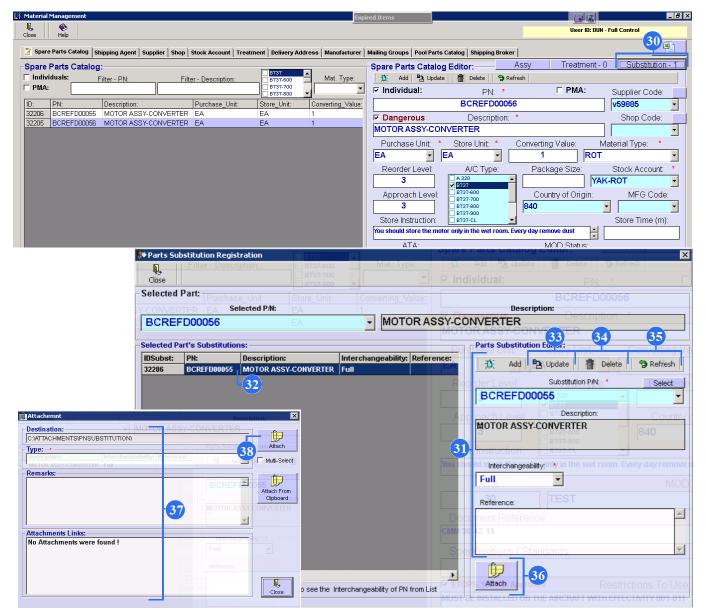

32. You can see save substitution in the Selected Part's Substitution List. Highlight the line.

33. Make a change in the Parts Substitution Editor and push Update button.

34. To remove the highlight line click on the Delete button.

35. To reset entered data click on the Refresh button.

36. To attach any documents click on the Attach button and Attachment screen will be appeared.

37. Fill out destination of the document, select type of the document, enter Remarks and Attachments Links if it is necessary.

38. Click on the Attach button.

All three tabs such as "Assy", "Treatment" and "Substitution" are used in the AMP module. If you have not entered data in these tabs, you will do it in the AMP module. If you filled in these tabs here, then this information is automatically transferred to the AMP module.

1

The A/C TIMES application allows users to register aircraft and APU utilization: total and the last flight cycles and hours. To begin to work with this submodule, you need click "A/C Times" button (1) on the right side of the PART M module list. On the left side of window there is A/C - APU Utilization Registration List (2). Here you can see the whole list of aircraft data. On the right side of window there is Editor page (3) for A/C utilization, APU utilization and ETOPS data.

The user's manual consists of seven sections: General Information, Aircraft Utilization, APU Utilization, Penalty Registration, Flight data filters and printout, Correction and APU Check.

Aircraft Utilization section provides step by step overview of the total hours and cycles calculation. Also, it is offered ETOPS flight registration if it is necessary. If you performed maintenance procedure before flight, you can type all data of maintenance result in the special window.

APU Utilization section explains how to register total APU hours and total APU cycles. Also, this section allows to print APU temperature.

Penalty Registration section is necessary to register penalties that will be displayed in case of helicopter utilization registration or in case of any types of aircraft if there is special flight operation condition that affects the component resource.

Flight Data Filters and Printout section gives you information about Date/A/C registration/APU utilization filters for quick searching of data. Also, you can know, how to transfer this data to Excel.

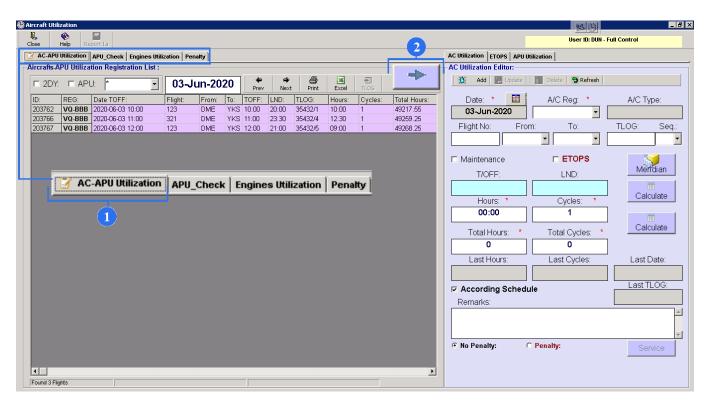

In case of incorrectly entered value or missing records you need correct AC Utilization value. Correction section provides recalculation of Total AC Utilization values from selected record to last record in sequence.

APU CHECK section allows to register APU start procedure in flight.

3. Aircraft Utilization

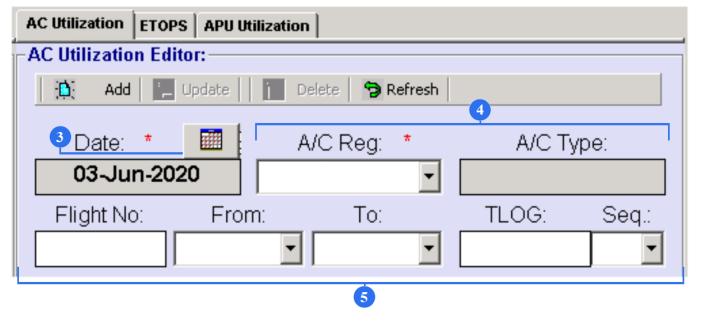

Aircraft Utilization section provides step by step overview of the total hours and cycles calculation. Also, it is offered ETOPS flight registration if it is necessary. If you performed maintenance procedure before flight, you can type all data of maintenance result in the special window.

1.To open an Aircrafts-APU Utilization Registration List, click on the AC-APU Utilization button.

2. To open the AC Utilization Editor, click on the arrow button.

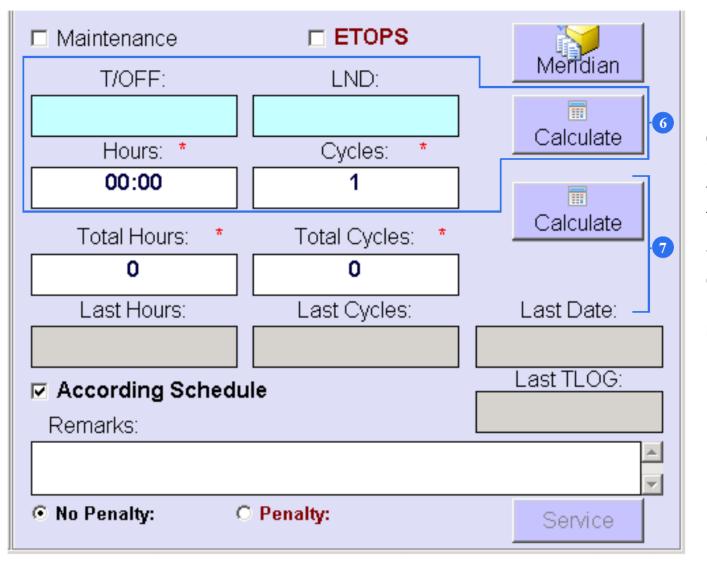

3. An Aircraft Editor will automatically generate a today's date. If the edit date is not today, use the calendar to select the correct flight date of proper aircraft.

4. Select aircraft registration. Aircraft type will appear automatically.

5. Write in Flight No/From/To fields

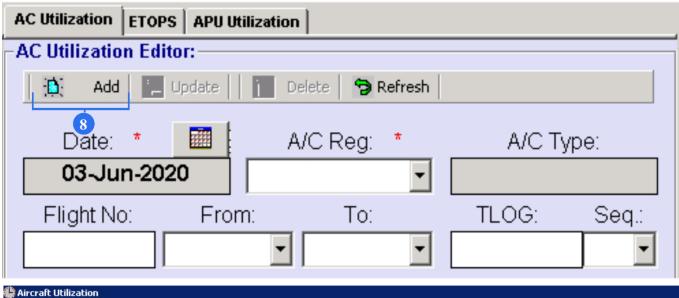

6. Type the takeoff time (T/OFF field) and landing time (LND field) (UTC), then click on the Calculate button, and the system will calculate flight hours. Also, you can manual fill Hours field or Cycles field without calculation.

7. To calculate total hours and total cycles, click on the Calculate button. Last Hours and Last Cycles fields are refilled by the system automatically. The Last Date information and Last TLOG data are also provided.

8. Click on the ADD button (at the top of the editor) to save data.

9. You can see saved aircraft utilization data on the Aircrafts-APU Utilization Registration List.

NOTE: Fields with a reference marks (*) are mandatory to fill. 'TLog' field can be also filled as 'N/A'.

NOTE: In case of incorrectly entered value or missing records "Correction" button is used to recalculation new total hours value. More information you can see in the Correction chapter on the page 19.

10. You can update the new data. Highlight the line (view9) and click on the UPDATE button.

11. To remove flight data of the corresponding aircraft, highlight the line (view 9) and click on the DELETE button.

12. To reset all data, click on the REFRESH button.

PART M REV 1 ISSUE 2 User Guidance

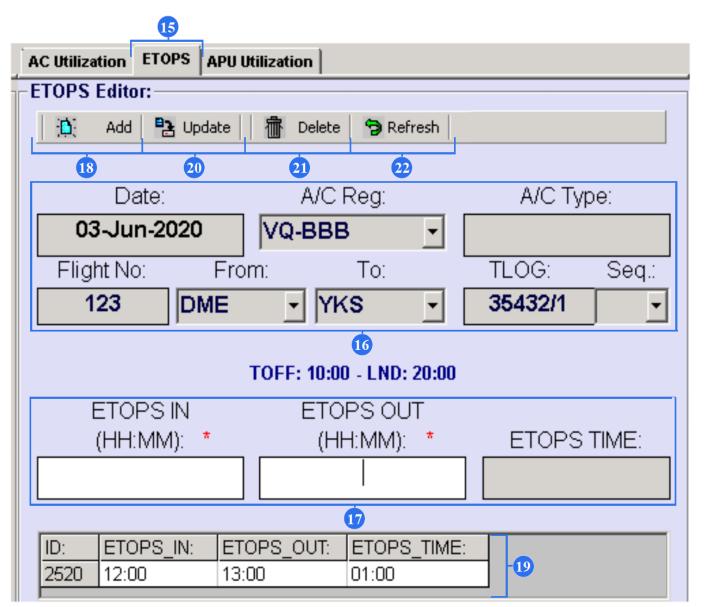

13. Registering Airplane Utilization, tick the No Penalty field. It is necessary for any types of aircraft if there is special flight operation condition that affects the component resource. More information you can see in the "Penalty registration" chapter on the page 30.

14. If it is ETOPS flight, tick the ETOPS field.

15. To open ETOPS Editor, click ETOPS button on the top of the Editor list.

16. Data such as Date, A/C Reg, A/C Type, Flight No, From, To and TLOG will appear automatically.

17. Type the ETOPS IN time and ETOPS OUT time. The system automatically calculates ETOPS time difference.

18. Click on the ADD button (at the top of the editor) to save data.

19. You can see saved ETOPS data on the ETOPS Editor List below.

20. You can update the new ETOPS data. Highlight the line (view 19) and click on the UPDATE button.

21. To remove ETOPS data, highlight the line (view 19) and click on the DELETE button.

22. To reset all ETOPS data, click on the REFRESH button.

27. Select a mechanical ID number in "Raised by" field. If it is necessary, tick PR or Mtx or Schd field, where:

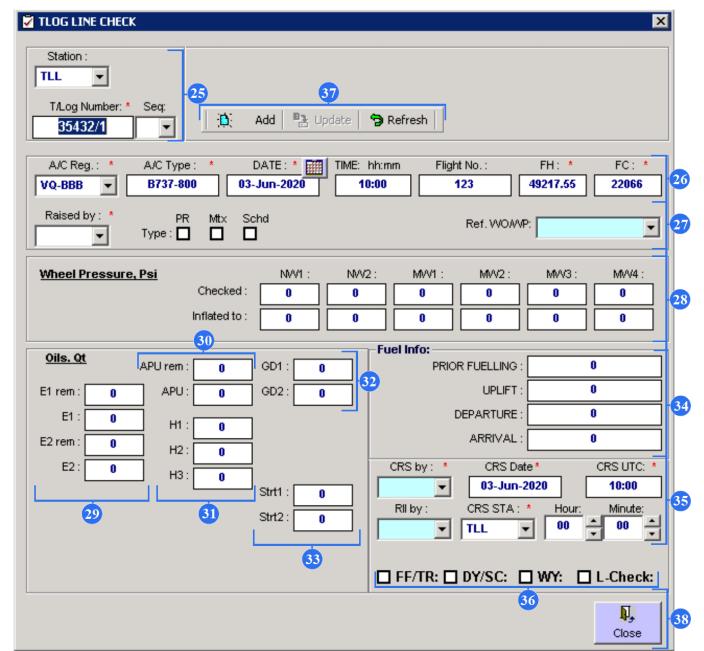

- PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
- Mtx Maintenance Remarks. Fault report is made in TLB by maintenance staff.
- Schd Schedule Remarks. It means defect rectification, or troubleshooting procedure during ground time.

In the WO/WP field please select work order number or work package number related Line Check.

PART M REV 1 ISSUE 2

User Guidance

28. Enter NW (Nose Wheel) and MW (Main Wheel) pressure data when checking and after inflated.

29. Enter result of engines oil servicing. For example, E1 rem means oil remain of the engine #1, but E1 means oil quantity after engine #1 after refill.

30. Enter result of APU oil servicing. APU rem means APU oil remain.

31. Enter result of hydraulic reservoir servicing. For example, H1 means hydraulic quantity of the first reservoir.

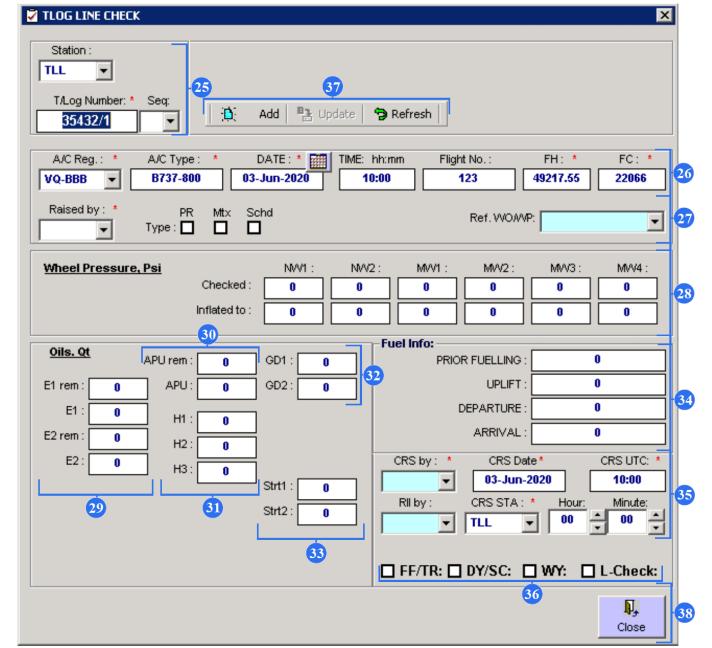

32. Enter result of drive generator oil servicing. For example, GD1 means generator drive of engine #1.

33. Enter result of starter oil servicing. For example, Strt1 means starter of engine #1.

PART M REV 1 ISSUE 2

User Guidance

34. Enter refuelling procedure data, where:

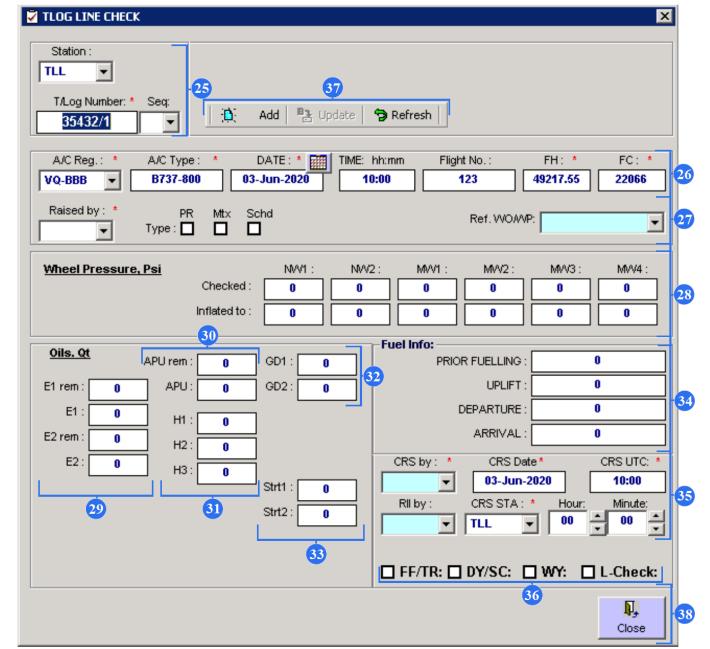

- PRIOR FUELLING -remain of fuel on the board.
- UPLIFT refuelling quantity.
- DEPARTURE total fuel quantity on the board before flight.
- ARRIVAL remain of fuel on the board after arrival.

35. Enter mechanical ID number to "CRS by" field, type CRS date and CRS time (in UTC). If another person was involved in the work, you can note additional signature in the "RII by field". Type the airport station, where CRS was issued. Also, you can enter hours and minutes to display the total work time of the maintenance staff.

PART M REV 1 ISSUE 2

User Guidance

36. Select by tick the type of line maintenance, where:

- FF/TR transit check
- DY/SC daily check
- WY weekly check
- L-check line check

37. To save entered data push "Add" on the upper toolbar.

After TLOG LINE CHECK editing completion you can still change other fields. After new data enter click Update button on the upper toolbar. To reset all data, click on the REFRESH button.

38. To close TLOG LINE CHECK window, push "CLOSE" button on the right bottom side of the window.

3. APU Utilization

APU Utilization section explains how to register total APU hours and total APU cycles. Also, this section allows to print APU temperature.

1. To open an Aircrafts-APU Utilization Registration List, click on the AC-APU Utilization button.

2. To open the APU Utilization Editor, click on the arrow button.

NOTE: Fields with a reference marks (*) are mandatory to fill. 'TLog' field can be also filled as 'N/A'.

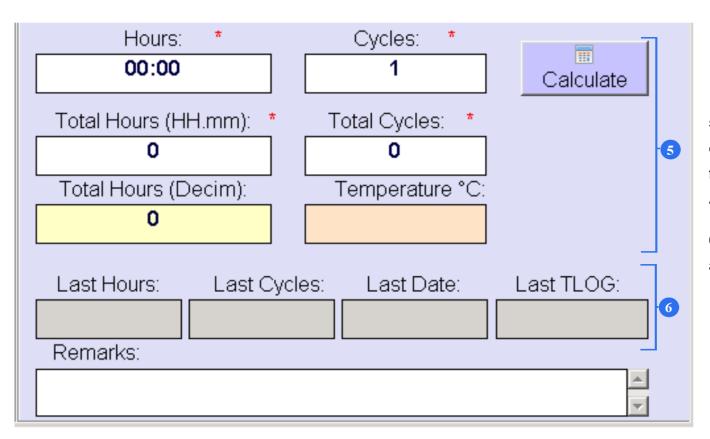

3. Select APU Utilization tab at the top of the editor.

4. An APU Editor will automatically generate a today's date. If the edit date is not today, use the calendar to select the correct flight date of proper aircraft. Select aircraft registration. Aircraft type will appear automatically. Write in Flight No/From/To and TLOG fields.

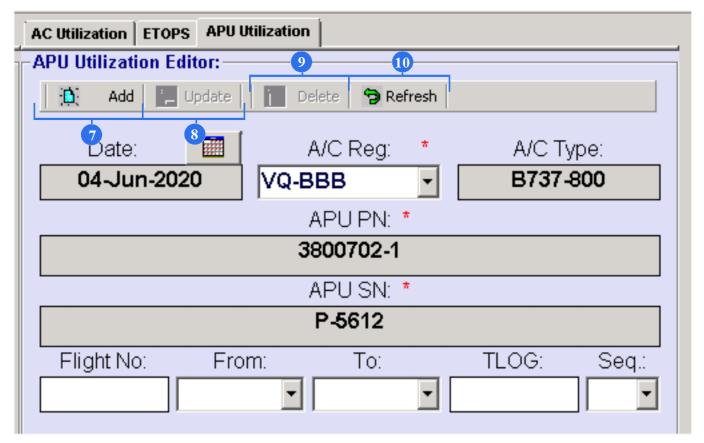

5. Type hours and cycles. To calculate total hours and cycles click on the Calculate button. Total Hours (HH.mm) field lets you to read APU total hours in decimal value. Also, you can type temperature data.

6. The Last Hours, Last Cycles, Last Date and Last TLOG are also provided.

7. Click on the ADD button to save data.

8. You can update the new APU data. Highlight the line (view 12) and click on the UPDATE button.

9. To remove APU data, highlight the line (view 12) and click on the DELETE button.

10. To reset all APU data, click on the REFRESH button.

1. Select on the Aircraft-APU Utilization Registration List the record needs to be corrected and push "Correction button" on the AC Utilization Editor and correction editor will be run.

Correction

NOTE: Correction editor consist of two frames. Upper frame is called by Aircraft Time Correction. It shows current value (selected record). Lower frame is called by Corrected Value. It permits to correct hours and cycles and show s new Total AC Utilization values from selected record to last record in sequence.

-Aircraft Time Correction:				
Date:	A/C Reg.:	Flight:	TLOG:	Seq:
03-06-2020	VQ-BBB	123	35432/5	
Hours:	Cycles:		Total Hours:	Total Cycles:
09.00			49268.25	22071
Corrected Value:				
Corrected Hours: * Hour: Minute:	Corrected Cycles	: *	Corrected Total Hours:	Corrected Total Cycles:
	1	2	49268.25	22071
Corrected Value Hours:	Corrected Value Cycles:		•	•
0	0	I		6
	3		Cance	

2. Type new hours and minutes. You can also type new cycles.

3. Difference of the hours and cycles will automatically appear.

4. You can see corrected total hours and total cycles data.

5. Push "Confirm" button to run recalculation of Total AC Utilization values from selected record to last record in sequence.

In case of missing records do these steps:

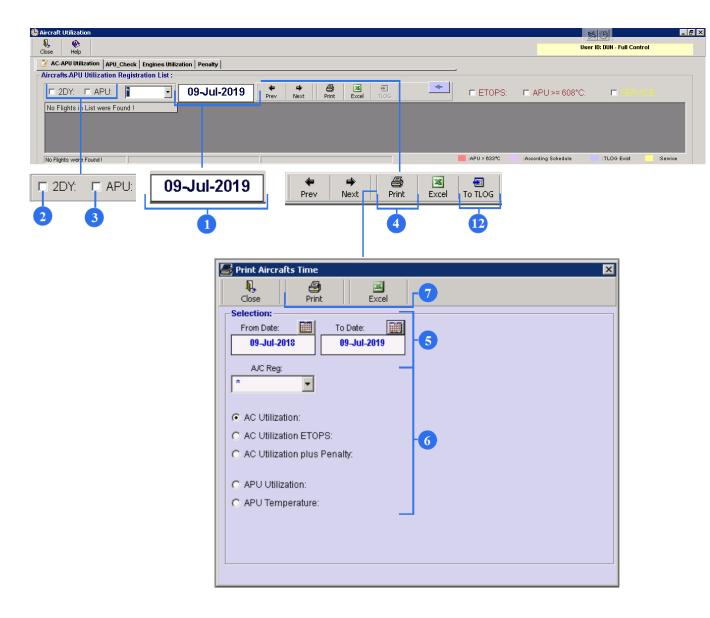

- Enter the missing record (see Aircraft Utilization chapter on the page 3);
- Select record above newly inserted record;
- Open correction editor (push "Correction" button)

To run recalculation, click "Confirm" button with zero corrected value.

PART M REV 1 ISSUE 2 User Guidance

5. Flight Data Filters and Printout

1. You can view flights of a selected aircraft at a particular date. For this action enter a necessary date in the date field.

2. If you need to view flights of the day before a particular date, tick the "2DY" field.

3. To view registered APU, tick the "APU" field.

4. You can print out flight data within a particular period of time. Click on the PRINT button.

5. Select from date and to date.

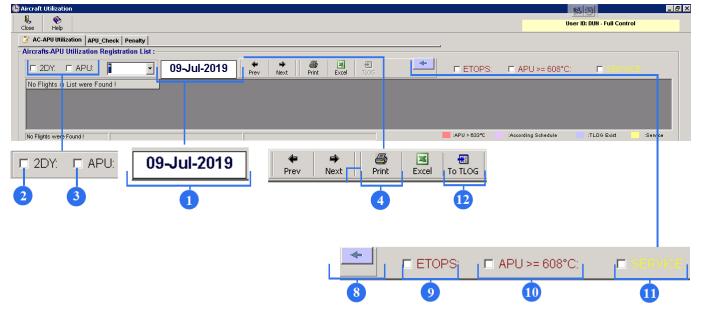

6. Select an aircraft and type of AC or APU data.

7. Click on the PRINT button. To view and print aircrafts time in the Excel format, click on Excel button.

8. Push needle button and Editor page will disappear.

9. Tick the ETOPS field to select from the whole list of the aircraft utilization only lines with ETOPS status.

10. Tick the APU>= 608° C field to select from the whole list of the aircraft utilization only lines with APU editor data, where temperature is more than 608° C.

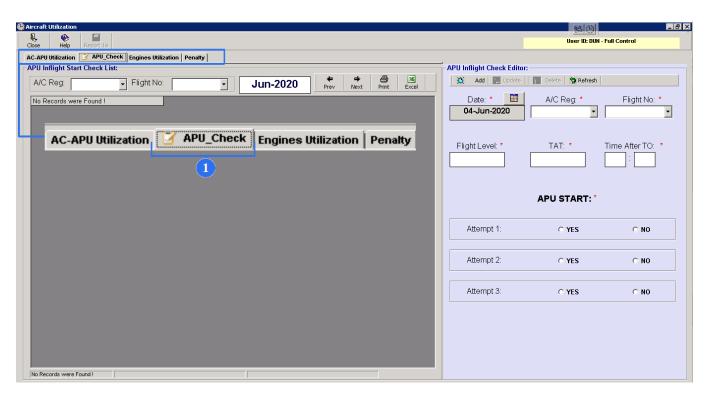

11. Tick the SERVICE field to select from the whole list of the aircraft utilization only lines, where there are service during pre-flight check.

12. If there was maintenance during pre-flight check for example after arrival report about system failure, push "To TLOG" button to write in your action. TLOG submodule filling rule you can see in TLOG user guidance. (PART M module - select TLOG submodule - select HELP insert).

6. APU Check

APU CHECK section allows to register APU start procedure in flight.

1. APU Check is used to register APU start in flight. To open an APU Inflight Start Check List, click on the APU Check button.

NOTE: Fields with a reference marks (*) are mandatory to fill.

-APU Inflight Check Editor	r:8

1. To open an Engine Utilization List, click on the Engine Utilization tab.

2. Select aircraft registration, serial number of engine and correct date.

3. You can see engine utilization information. This data is generated from AC Utilization. Last 4 columns are Engine FH (time since new), Engine FC (Cycle since new), AC FH (time in one flight) and AC FC.

4. Also, all engine data changes may be monitored in the "Actual Component Editor".

8. Penalty Registration.

Penalty Registration section is necessary to register penalties that will be displayed in case of helicopter utilization registration or in case of any types of aircraft if there is special flight operation condition that affects the component resource.

6.3. View	290

1. General Information

A Technical Log sub-module registers all primary information, obtained from a pilot, result of maintenance performance and further troubleshooting actions, taken by a mechanic.

To begin to work with this submodule, you need click "T/LOG" button (1) on the right side of the PART M module list. A small window will appear. It contains aircraft registration list (2). Highlight the related aircraft and click on the "Select" button below (3).

The user's manual consists of six sections: Technical Log Creation, Component Replacement (LRU), Technical Log Line Check, Transfer to NRC and transfer to WO, Reports and View.

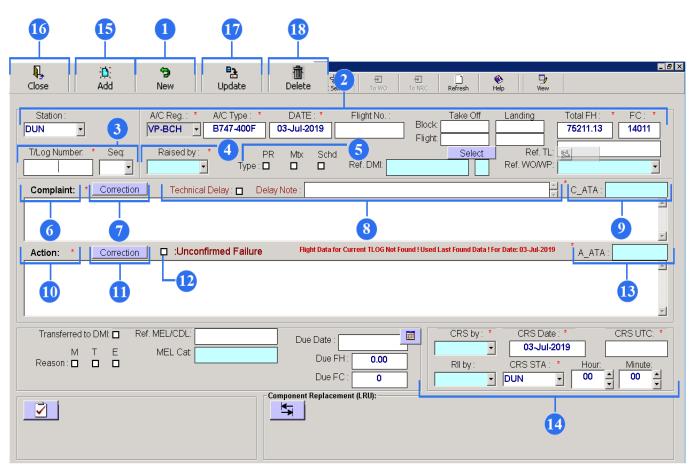

Technical Log Creation provides step by step overview of the new T/Log creation with defect rectification, of the T/Log creation with MEL/CDL and of the T/Log creation with closing reference DMI number.

Component Replacement (LRU) section explains how to register replace of the component. Technical Log Line Check section give you information about results of service procedure. Also, while T/Log creating with MEL/CDL you can use transfer to NRC function or transfer to WO function. Thanks to these features, it is possible to monitor opened defect.

Reports section explains how to see all the DMI (HIL) closed and opened reports. Also, you can find aircraft maintenance history for any period. View section shows all the creating T/Logs.

2. Technical Log Creation 2.1 T/Log creation with a defect rectification

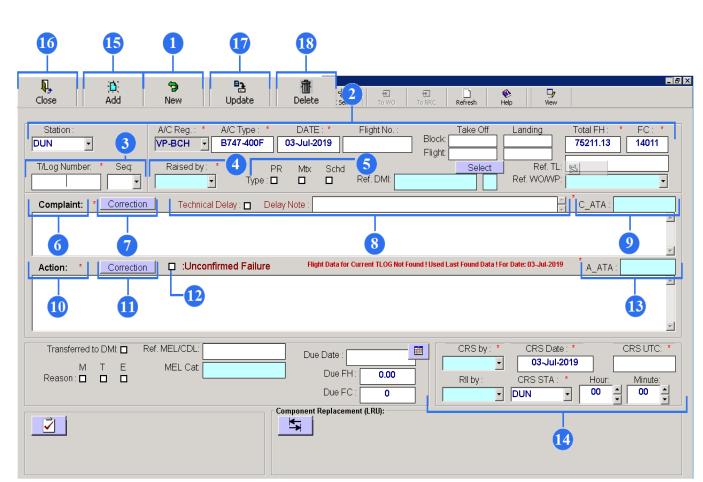

1. To create a new T/L, push NEW button on the upper toolbar of the Technical LOG screen.

2. Select airport station. A/C REG; A/C Type; Flight No fields are automatically displayed. Write in Take Off column and Landing column. The Block line means take off time and landing time, but The Flight line means aircraft motion time from gate to gate. Total FH and FC fields are filled automatically and show aircraft utilization values.

3. Enter a T/L number and its sequences (there are Technical Log Books where the whole page has number, but each reference has item number (sequence), and there are Technical Log Books where the page has references with own numbers, then Seq field is not required).

4. Select a mechanical ID number. Click F1 button on your computer keyboard to see more information about mechanical.

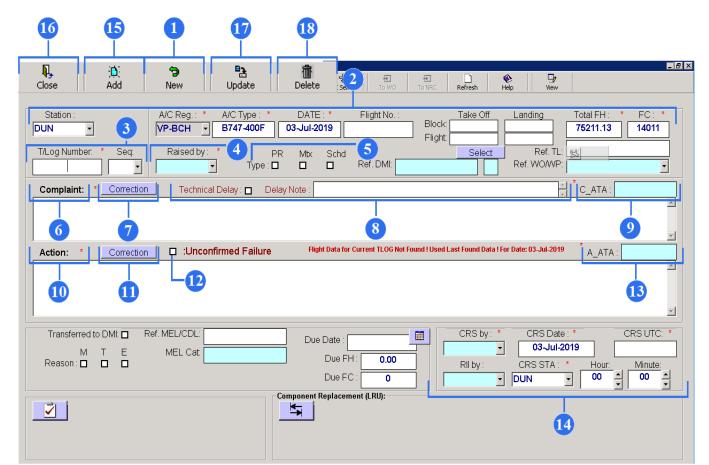

- 5. Tick PR or Mtx or Schd field, where
 - PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
 - Mtx–Maintenance Remarks. Fault report is made in TLB by maintenance staff.
 - Schd–Schedule Remarks. It means defect rectification, or troubleshooting procedure during ground time.

6. Complaint field is needed to record all pilot remarks or remarks, that was found during maintenance.

7. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

8. If a complaint is serious and an aircraft needs to be delayed due to some technical reasons, tick the 'Technical Delay' and make a Delay Note.

9. Select from ATA catalog correct system chapter number of related remark.

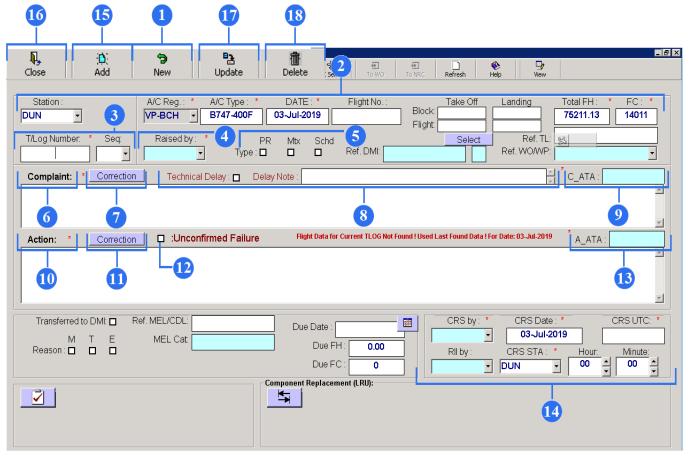

10. Action field is needed to record all actions taken by maintenance staff.

11. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

12. You can put the tick Unconfirmed Failure field, if the pilot remarks are not confirmed during troubleshooting, for example it was intermittent fault.13. Select from ATA catalog correct system chapter number of related remark.

14. Enter mechanical ID number to "CRS by" field, type CRS date and CRS time (in UTC). If another person was involved in the work, you can note additional signature in the "RII by field". Type the airport station, where CRS was issued. Also, you can enter hours and minutes to display the total work time of the maintenance staff.

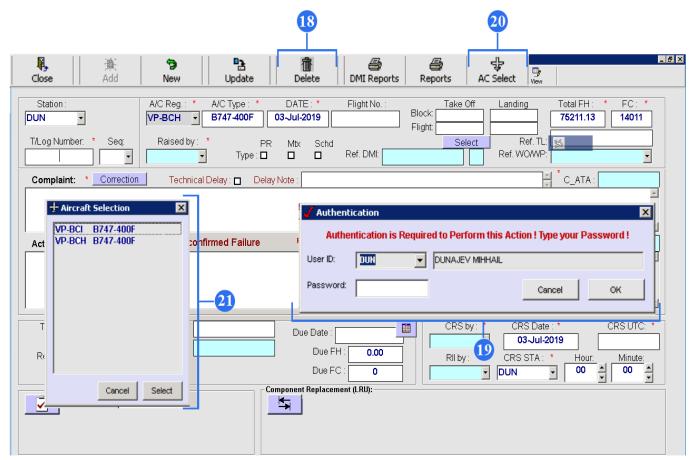

15. On the upper toolbar push the Add button to save a new created Tech Log.

16. To exit the T/Log screen, click the CLOSE toolbar button.

17. After TLOG registration completion you can still refill other fields except Complaint/Action field (Correction button performs this function). After new data enter click Update button on the upper toolbar.

18. To remove a T/Log click the Delete toolbar button.

19. But you need an authentication for this action: enter your id and password in the authentication screen.

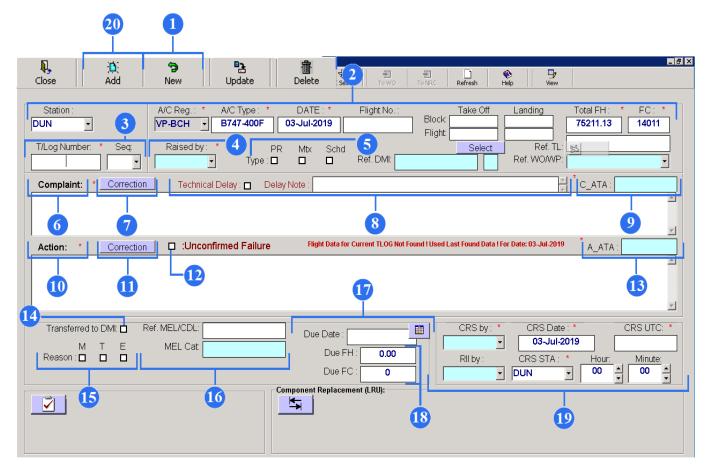

20. If you want to create new T/Log with other A/C registration number, no need to exit from T/Log submodule and re-enter. Push "AC Select" button.

21. From the whole list highlight other A/C registration and push "Select" button.

NOTE: Fields with a reference marks (*) are mandatory to fill.

2.2 T/Log creation using MEL/CDL.

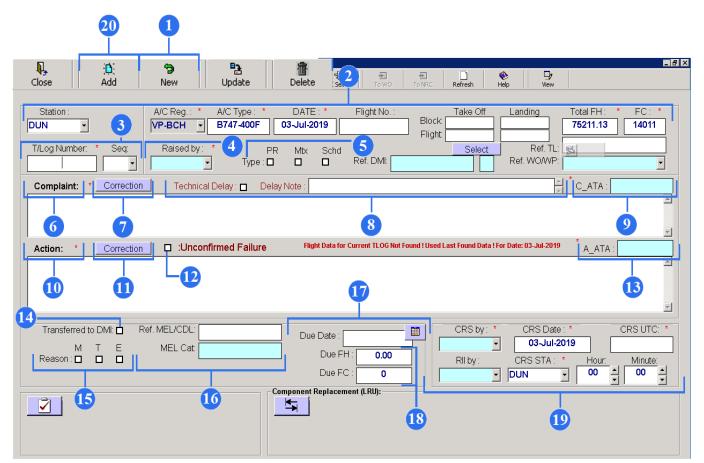

1. To create a new T/L, push NEW button on the upper toolbar of the Technical LOG screen.

2. Select airport station. A/C REG; A/C Type; Flight No fields are automatically displayed. Write in Take Off column and Landing column. The Block line means take off time and landing time, but The Flight line means aircraft motion time from gate to gate. Total FH and FC fields are filled automatically and show aircraft utilization values.

3. Enter a T/L number and its sequences (there are Technical Log Books where the whole page has number, but each reference has item number (sequence), and there are Technical Log Books where the page has refences with own numbers, then Seq field is not required).

4. Select a mechanical ID number. Click F1 button on your computer keyboard to see more information about mechanical.

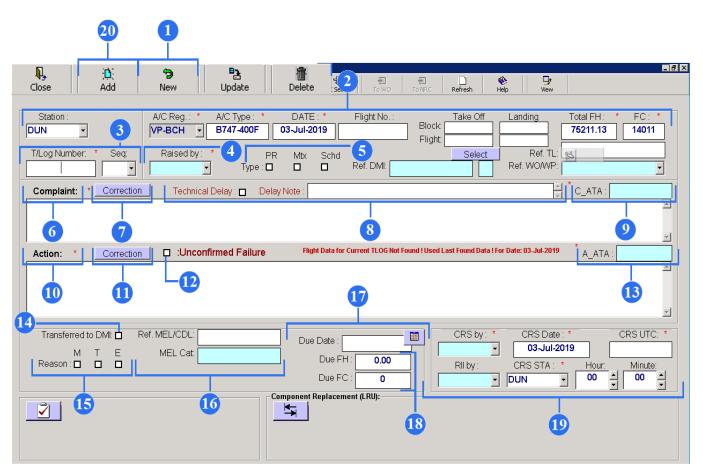

- 5. Tick PR or Mtx or Schd field, where
 - PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
 - Mtx–Maintenance Remarks. Fault report is made in TLB by maintenance staff.
 - Schd–Schedule Remarks. It means defect rectification, or troubleshooting procedure during ground time.
- 6. Complaint field is needed to record all pilot remarks or remarks, that was found during maintenance.

7. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

8. If a complaint is serious and an aircraft needs to be delayed due to some technical reasons, tick the 'Technical Delay' and make a Delay Note.

9. Select from ATA catalog correct system chapter number of related remark.

10. Action field is needed to record all actions taken by maintenance staff.

11. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

12. You can put the tick Unconfirmed Failure field, if the pilot remarks are not confirmed during troubleshooting, for example it was intermittent fault.13. Select from ATA catalog correct system chapter number of related remark.

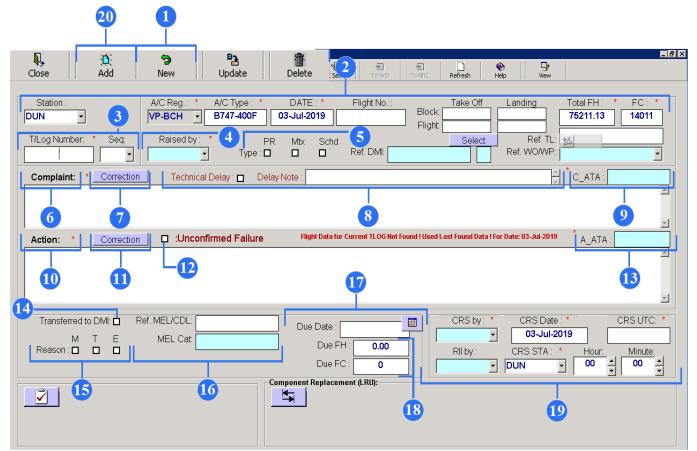

14. Tick the "Transferred to DMI" to confirm deferred reference with dead line.

DMI – Deferred Maintenance Item.

15. Select the reason of the deferred reference creation, where:

- M Material. Components are not available in the store;
- T Time. No ground time for defect rectification;
- E Equipment. Special tools are not available in the kit.

16. Write in MEL/CDL item and select MEL category (from A to D). If the defect is opened in accordance with other technical documentation such as AMM, SRM, FIM, TSM or operator letter, select N/A category).

17. To set a dead line, click on Calendar button and a Date Calendar will open. Select a due date.

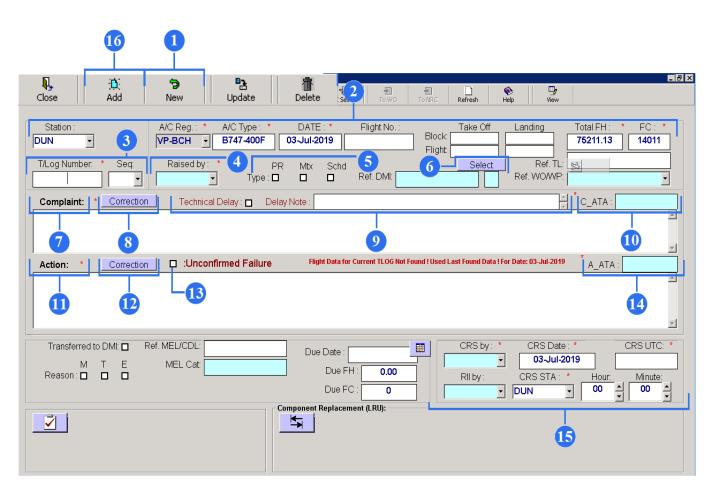

18. If the dead line does not depend on MEL category, but it depends on amount of the flight hours or cycles, write in due FH or due FC.

19. Enter mechanical ID number to "CRS by" field, type CRS date and CRS time (in UTC). If another person was involved in the work, you can note additional signature in the "RII by field". Type the airport station, where CRS was issued. Also, you can enter hours and minutes to display the total work time of the maintenance staff.

20. On the upper toolbar push the Add button to save a new created Tech Log.

2.3 T/Log creation with closing reference DMI number.

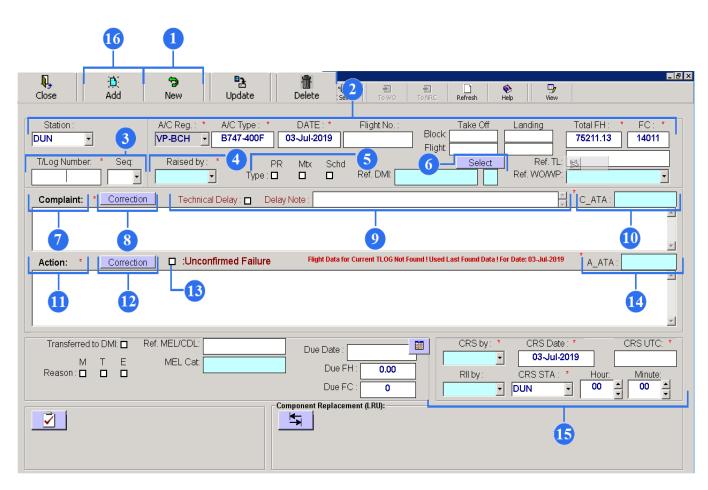

1. To create a new T/L, push NEW button on the upper toolbar of the Technical LOG screen.

2. Select airport station. A/C REG; A/C Type; Flight No fields are automatically displayed. Write in Take Off column and Landing column. The Block line means take off time and landing time, but The Flight line means aircraft motion time from gate to gate. Total FH and FC fields are filled automatically and show aircraft utilization values.

3. Enter a T/L number and its sequences (there are Technical Log Books where the whole page has number, but each reference has item number (sequence), and there are Technical Log Books where the page has references with own numbers, then Seq field is not required).

4. Select a mechanical ID number. Click F1 button on your computer keyboard to see more information about mechanical.

5. Tick PR or Mtx or Schd field, where

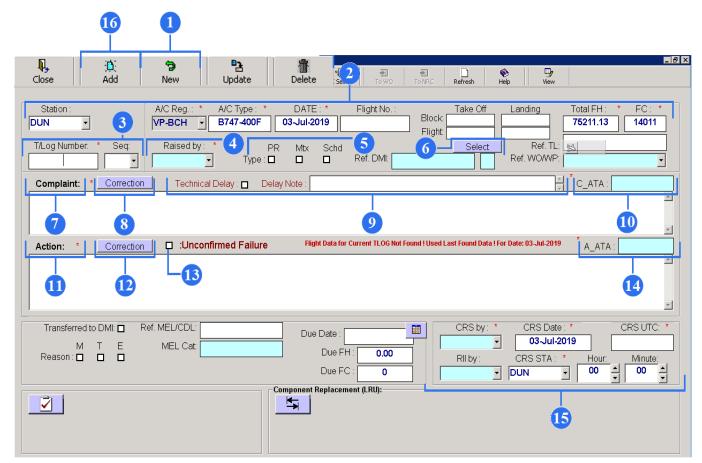

- PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
- Mtx–Maintenance Remarks. Fault report is made in TLB by maintenance staff.
- Schd–Schedule Remarks. It means defect rectification, or troubleshooting procedure during ground time.

6. Push "Select" button of the DMI field to select deferred item, and click from the whole list deferred item that you want to close.

7. Complaint field is needed to record all pilot remarks or remarks, that was found during maintenance.

8. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

9. If a complaint is serious and an aircraft needs to be delayed due to some technical reasons, tick the 'Technical Delay' and make a Delay Note.

10. Select from ATA catalog correct system chapter number of related remark.

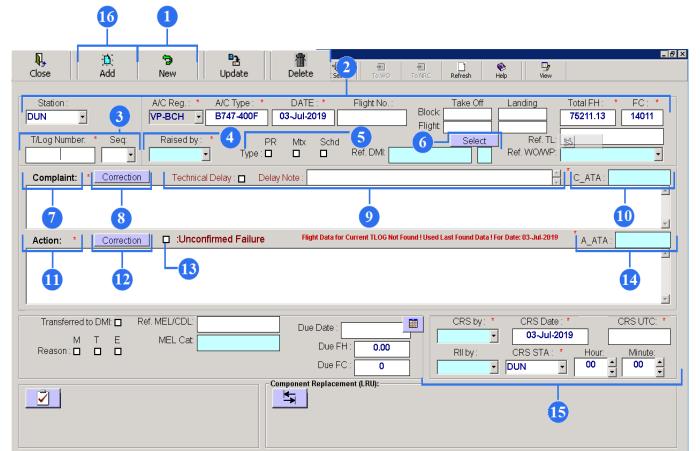

11. Action field is needed to record all actions taken by maintenance staff.

12. After TLOG registration completion it will not be possible to remove the text from Complaint field or Action field. Use the Correction button to correct the text.

13. You can put the tick Unconfirmed Failure field, if the pilot remarks are not confirmed during troubleshooting, for example it was intermittent fault.

14. Select from ATA catalog correct system chapter number of related remark.

15. Enter mechanical ID number to "CRS by" field, type CRS date and CRS time (in UTC). If another person was involved in the work, you can note additional signature in the "RII by field". Type the airport station, where CRS was issued. Also, you can enter hours and minutes to display the total work time of the maintenance staff.

16. On the upper toolbar push the Add button to save a new created Tech Log.

NOTE: Fields with a reference marks (*) are mandatory to fill.

ATTENTION: It is comfortable to use NRC submodule if you have multistage troubleshooting within deadline of defect. You can tie references between each other. Use the T/Log for defect rectification at once, or to open defect while single step operation.

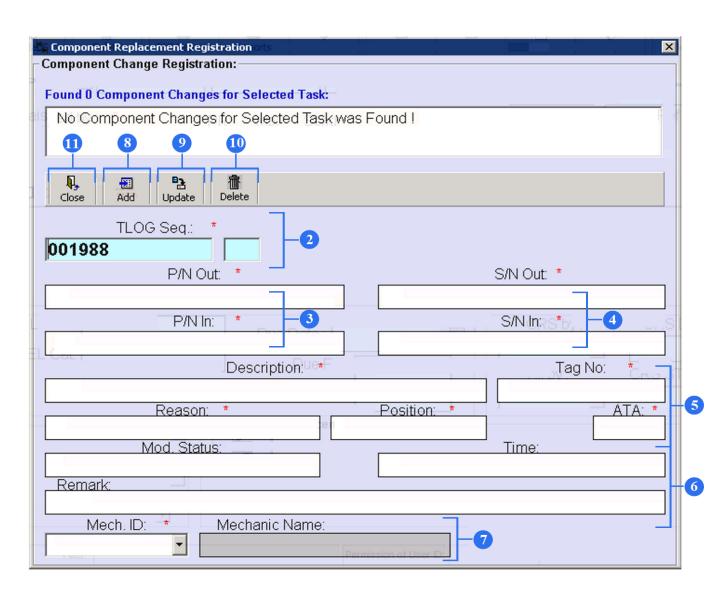

3. Component Replacement (LRU)

Component (LRU):

1. If Line Check was performed after arrival or before departure, you can registrate these data in the TLog submodule. Push button with the tick in the left bottom side of the screen to open TLOG LINE CHECK window.

NOTE: Fields with a reference marks (*) are mandatory to fill.

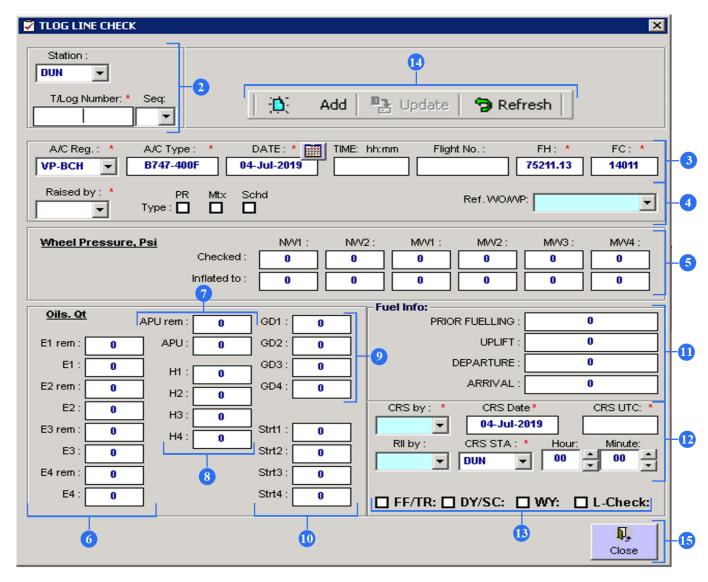

2. Station and T/Log Number will appear automatically.

3. Data such as A/C Reg, A/C Type, Date, FH and FC will appear automatically. If the edit date is not today, use the calendar to select the correct flight date of proper aircraft. Fill the "TIME" and "Flight No" fields.

4. Select a mechanical ID number in "Raised by" field. If it is necessary, tick PR or Mtx or Schd field, where:

- PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
- Mtx Maintenance Remarks. Fault report is made in TLB by maintenance staff.
- Schd Schedule Remarks. It means defect rectification, or troubleshooting procedure during ground time.

In the WO/WP field please select work order number or work package number related Line Check.

5. Enter NW (Nose Wheel) and MW (Main Wheel) pressure data when checking and after inflated.

6. Enter result of engines oil servicing. For example,E1 rem means oil remain of the engine #1, but E1means oil quantity after engine #1 after refill.

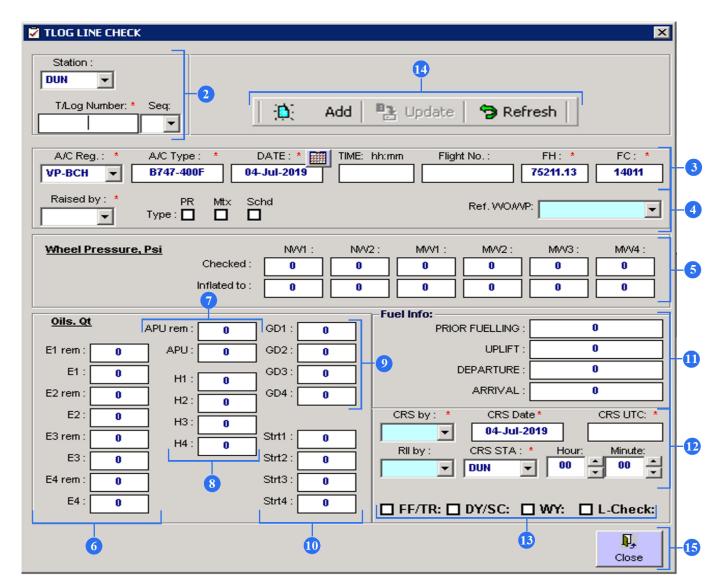

7. Enter result of APU oil servicing. APU rem means APU oil remain.

8. Enter result of hydraulic reservoir servicing. For example, H1 means hydraulic quantity of the first reservoir.

9. Enter result of drive generator oil servicing. For example, GD1 means generator drive of engine #1.

10. Enter result of starter oil servicing. For example,Strt1 means starter of engine #1.

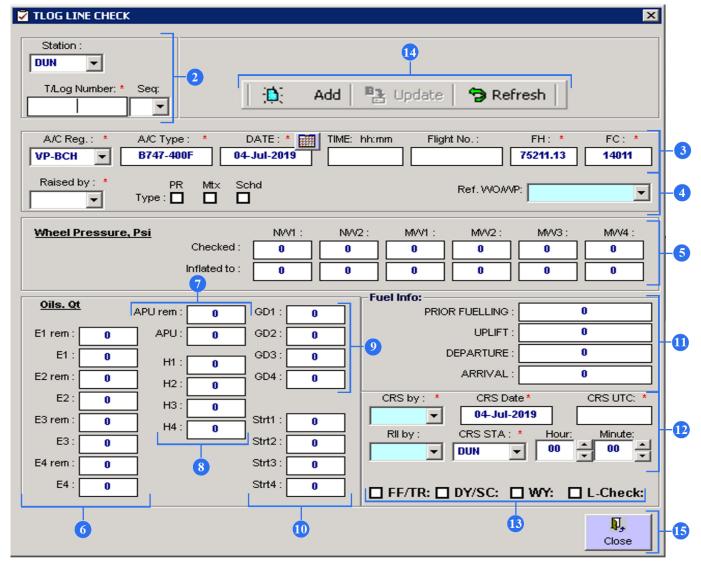

- 11. Enter refuelling procedure data, where:
 - PRIOR FUELLING -remain of fuel on the board.
 - UPLIFT refuelling quantity.
 - DEPARTURE total fuel quantity on the board before flight.
 - ARRIVAL remain of fuel on the board after arrival.

12. Enter mechanical ID number to "CRS by" field, type CRS date and CRS time (in UTC). If another person was involved in the work, you can note additional signature in the "RII by field". Type the airport station, where CRS was issued. Also, you can enter hours and minutes to display the total work time of the maintenance staff.

13. Select by tick the type of line maintenance, where:

- FF/TR transit check
- DY/SC daily check
- WY weekly check
- L-check line check

14. To save entered data push "Add" on the upper toolbar.

After TLOG LINE CHECK editing completion you can still change other fields. After new data enter click Update button on the upper toolbar.

To reset all data, click on the REFRESH button.

15. To close TLOG LINE CHECK window, push "CLOSE" button on the right bottom side of the window.

6. To make changes to any saved T/Log, move the cursor over the selected line and click on two times. Editor window will appear.

7. You can use different ticks or "Delay Note" field to make a change and push "Save" button, but to change other T/Log fields click on the "to Editor" to transfer to Technical LOG screen. Make a change and push the "Update" button on the upper screen to save changes.

"Cancel" button is needed to close Editor window.

NRC – NON – ROUTINE CARD

User Guidance

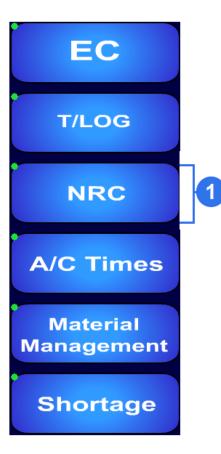

Contents

1. General	294
2. Non – Routine Card (NRC) creation	295
2.1. NRC creation with defect rectification.	295
2.2. NRC creation with opening defect using MEL/CDL or other technical documentation	302
2.3. NRC creation with closing deferred defect.	312
3. NRC toolbar overview.	317

1. General.

A non – routine card is registrated in case of new detected defects and problems, when there is no opportunity to solve technical problem right now. To begin to work with this submodule, you need click "NRC" button (1) on the right side of the PART M module list.

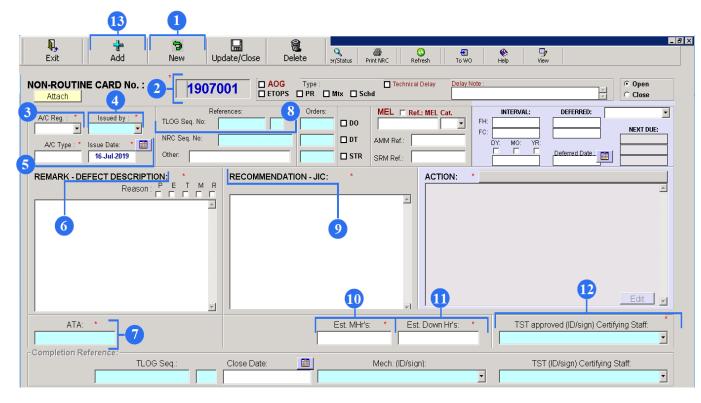

The user's manual consists of two sections: NRC creation and NRC toolbar overview.

Non – routine card creation provides step by step overview of the new NRC creation with defect rectification, of the NRC creation using MEL/CDL and of the NRC creation with closing deferred defect.

NRC toolbar overview section gives you information how to create new NRC with other A/C registration number without exit from NRC submodule and re-enter. Also, this section allows to find any necessary information by using history filters and to find NRC maintenance history for any period.

Non – Routine Card (NRC) creation. NRC creation with defect rectification.

 To create a new NRC, push "NEW" button on the upper toolbar of the NON – ROUTINE CARD screen.
 The NRC number will appear automatically. It is unique number which is created by NRC sub - module. It gets rid of duplicate number.

3. Select aircraft registration and aircraft type will automatically appear.

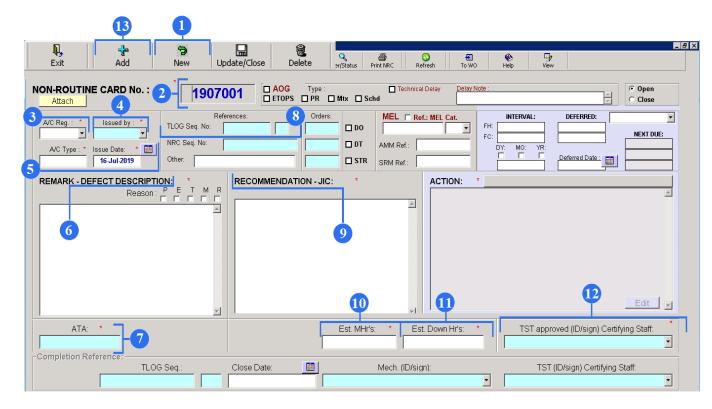

4. Select a mechanical ID number. Click F1 button on your computer keyboard to see more information about mechanical.

5. NRC Editor will automatically generate a today's date. If the edit date is not today, use the calendar to select the correct flight date of proper aircraft.

6. REMARK field is needed to record all pilot remarks or remarks, that was found during maintenance.

NOTE: Fields with a reference marks (*) are mandatory to fill.

7. Select from ATA catalog correct system chapter number of related remark.

8.Enter a T/L number and its sequences (there are Technical Log Books where the whole page has number, but each reference has item number (sequence), and there are Technical Log Books where the page has references with own numbers, then Seq field is not required).

9. RECOMENDATION field is needed to record all recommendation for maintenance such as documentation references, or maintenance limitation. JIC – Job Instruction Card.

- 10. Enter estimated man hours (Est. MHr's).
- 11.Enter estimated down hours (Est. Down Hr's)

12. Enter mechanical ID number to "TST approved (ID/sign) Certifying Staff" field.

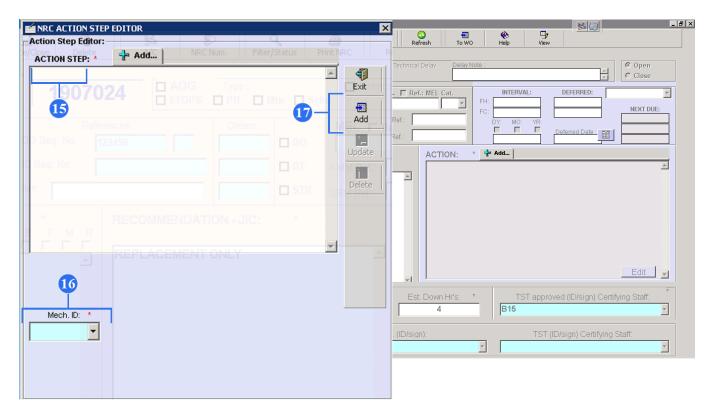

13. Push "Add" button to confirm transfer current NRC to PART – M Planning Module as a new task for completion.

Completion Reference:	Close Date: Mech. (ID/sign): TST (ID/sign) Certifying Staff	f:

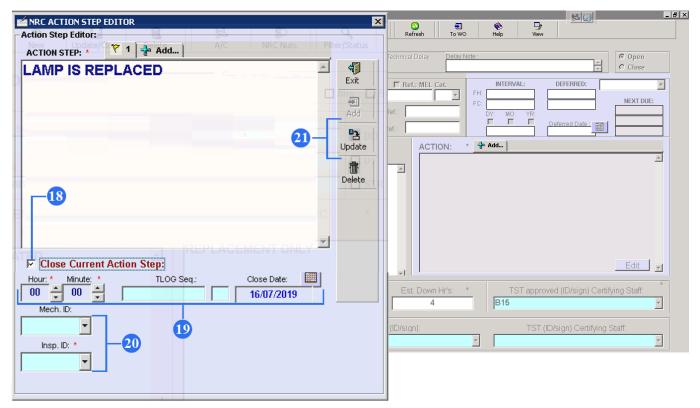

14. To record all actions taken by maintenance staff push ADD button, and NRC Action Step Editor will open.

- 15. Enter all actions taken by maintenance staff.
- 16. Enter mechanical ID number to "MECH ID" field.
- 17. Push "Add" button to confirm new add action.

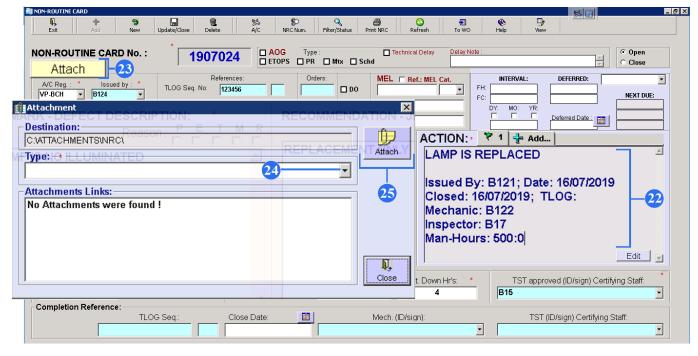

18. Tick the "Close Current Action Step" field.19. Enter hours and minutes to display the total work time of the maintenance staff. Type the TLOG number and select the related date.

20. Enter mechanical ID number and Inspector ID number.

21. Push the "Update" button to confirm close action step.

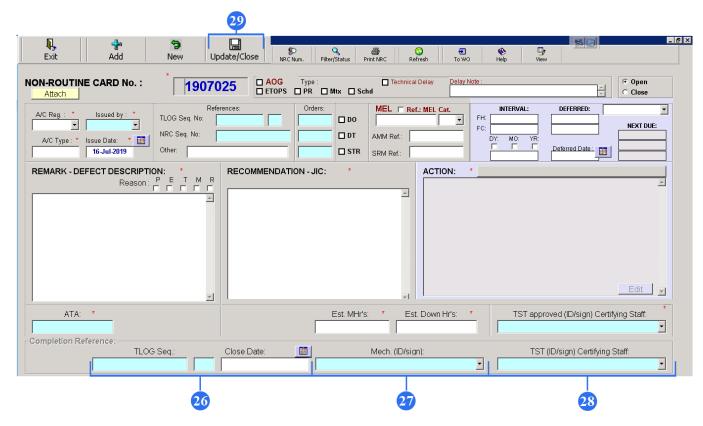

22. You can see the records in the "Action" field.

23. If you want to attach the defect by add information such as picture, W.O. or AMM illustration, push yellow "Attach" button.

24. Select a type of the information.

25. Push the "Attach" button and find this file in your computer memory.

26. Enter a T/L number and its sequences. Use the calendar to select the correct flight date of proper aircraft.

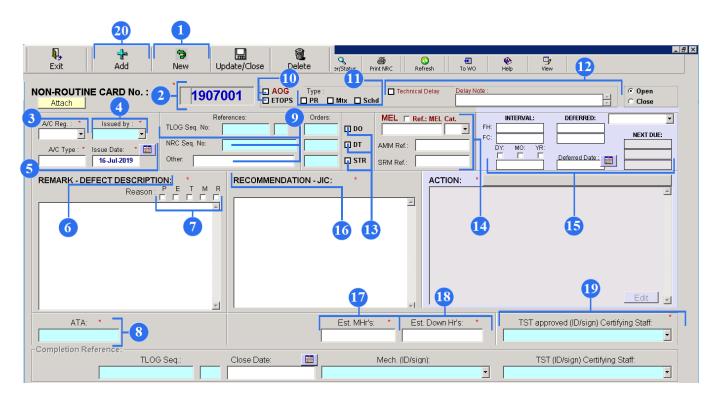

27. Enter mechanical ID number to "Mech.(ID/sign)" field.

28. Enter mechanical ID number to "TST approved (ID/sign) Certifying Staff" field.

29. Push "Update/Close" button on the upper toolbar to confirm update current NRC.

2.2. NRC creation with opening defect using MEL/CDL or other technical documentation.

1. To create a new NRC, push "NEW" button on the upper toolbar of the NON – ROUTINE CARD screen.

2. The NRC number will appear automatically. It is unique number which is created by NRC sub module. It gets rid of duplicate number.

3. Select aircraft registration and aircraft type will automatically appear.

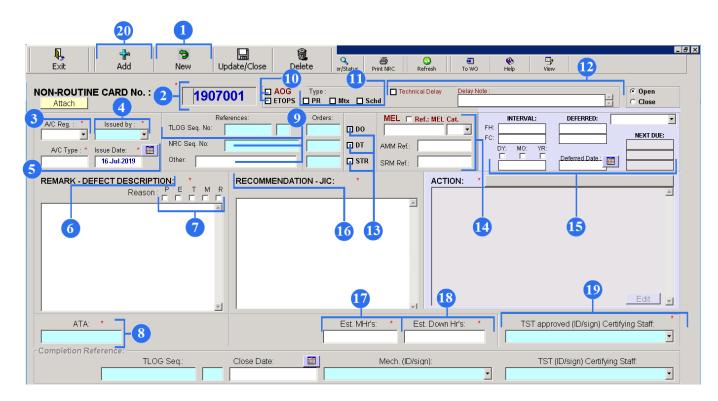

4. Select a mechanical ID number. Click F1 button on your computer keyboard to see more information about mechanical.

5. NRC Editor will automatically generate a today's date. If the edit date is not today, use the calendar to select the correct flight date of proper aircraft.

6. REMARK field is needed to record all pilot remarks or remarks, that was found during maintenance.

NOTE: Fields with a reference marks (*) are mandatory to fill.

7. Select the reason of the deferred reference creation, where:

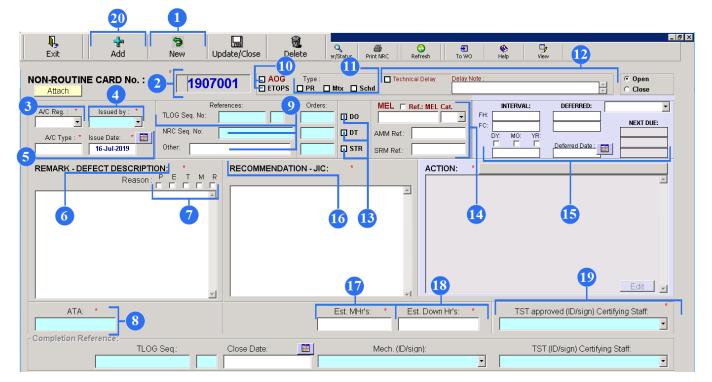

- P pilot remark;
- E lack of equipment;
- T lack of time;
- M lack of material;
- R lack of resources.

8. Select from ATA catalog correct system chapter number of related remark.

9.Enter a T/L number and its sequences (there are Technical Log Books where the whole page has number, but each reference has item number (sequence), and there are Technical Log Books where the page has references with own numbers, then Seq field is not required).

If you want to tie defect in the actual NRC with defect of the old existing NRC, select in "NRC Seq No" field from the whole list corresponding NRC number. It helps to monitor repeating defect.

"Other" field is necessary to enter document according to which the action was performed. (for example: work order, work package, operator letter)

10. If it is ETOPS flight, tick the ETOPS field. If there is non-flight defect, tick the AOG field.

- 11. Tick PR or Mtx or Schd field, where
 - PR Pilot Remarks. Pilot makes report about fault in TLB before departure or after arrival.
 - Mtx–Maintenance Remarks.
 - Fault report is made in TLB by maintenance staff.
 - Schd–Schedule Remarks.

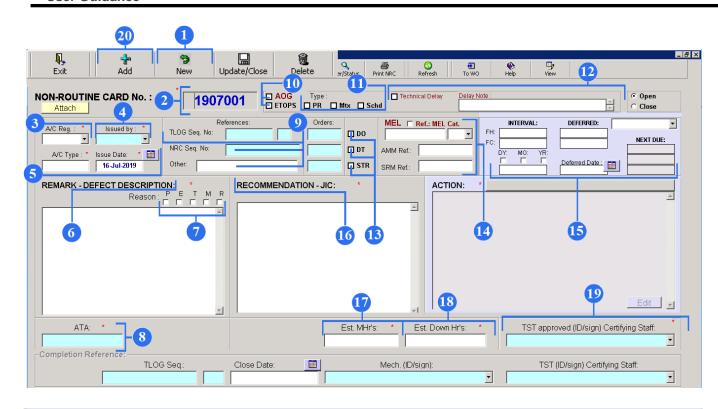

It means defect rectification, or troubleshooting procedure during ground time.

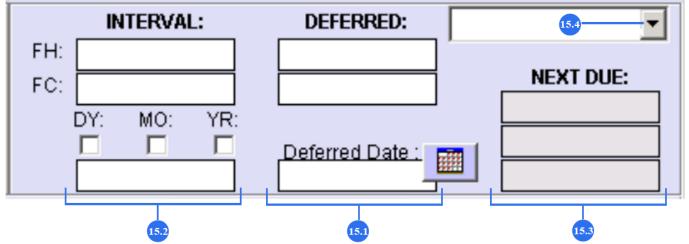

12. If a complaint is serious and an aircraft needs to be delayed due to some technical reasons, tick the 'Technical Delay' and make a Delay Note.

13. Select status of defect, where:

- DO- deferred operation;
- DT deferred technical
- STR structural.

14. Tick the MEL field, write in MEL item and select MEL category (from A to D). If the defect is opened in accordance with other technical documentation such as AMM, SRM, FIM, TSM or operator letter, select N/A category. Further type the technical documentation reference.

15. This section is required to set deadlines of defects. Also, it permits to enter interval of inspection and it allows to defer the defect until the next heavy maintenance.

15.1. If you open a defect accordance to MEL or CDL, set a dead line using Calendar button (deferred date field).

If the dead line does not depend on MEL category, but it depends on amount of the flight hours or flight cycles detected in other technical documentation (for example AMM, FIM, SRM) use "DEFERRED" column to set corresponding dead line. <u>Give an example.</u>

SRM offers to defer the dent repair for 1500 FH. You must add 1500 FH to total flight hours, and enter this result in the first line of the "DEFERRED" column. It is the same with flight cycles.

Give the second example.

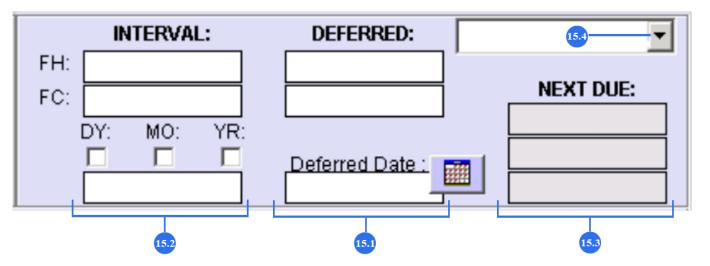

You open the defect accordance to operator letter for 5 days. Use calendar button (Deferred Date field) to set dead line.

15.2. "INTERVAL" column is used only to set interval inspection of damage within corresponding dead line.

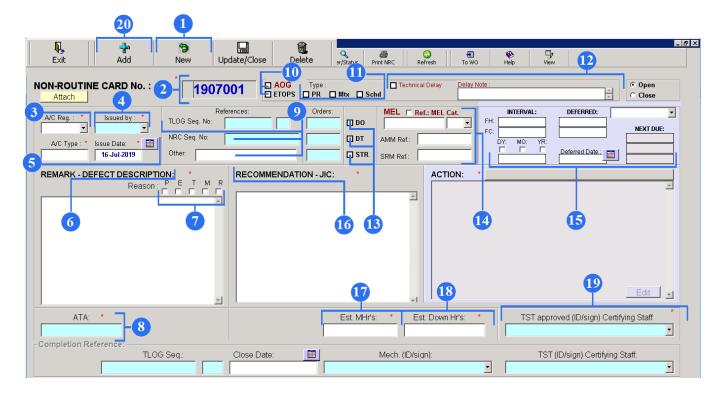

Give an example.

SRM suggests to defer the cargo floor puncture for 1500 FH and to install high speed tape. But within 1500 FH it is necessary to check high speed tape condition every 100 FH. In this case you must add 1500 FH to total flight hours, and enter this result in the first line of the "DEFERRED" column. And you must enter 100 FH in the first line of the INTERVEL column. After it you can see data of the next due. (see figure 15.3)

15.4. If you open a defect until the next heavy maintenance push on the button with triangle and select corresponding maintenance.

16. RECOMENDATION field is needed to record all recommendation for maintenance such as documentation references, or maintenance limitation.

JIC – Job Instruction Card.

17. Enter estimated man hours (Est. MHr's).

18. Enter estimated down hours (Est. Down Hr's)

19. Enter mechanical ID number to "TST approved (ID/sign) Certifying Staff" field.

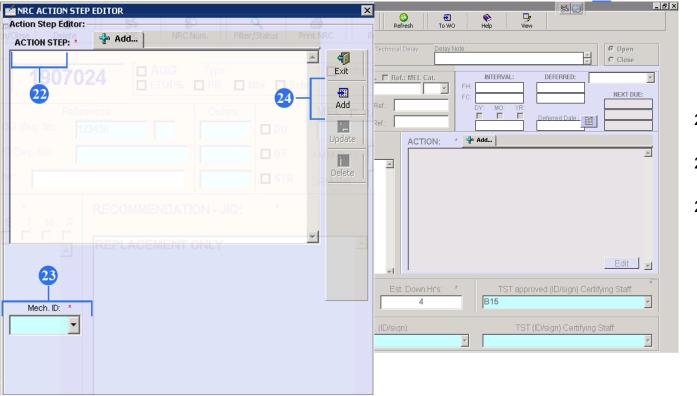

20. Push "Add" button to confirm transfer current NRC to PART – M Planning Module as a new task for completion.

1. If you want to create new NRC with other A/C registration number, no need to exit from NRC submodule and re-enter. Push "AC Select" button.

2. From the whole list highlight other A/C registration and click two times.

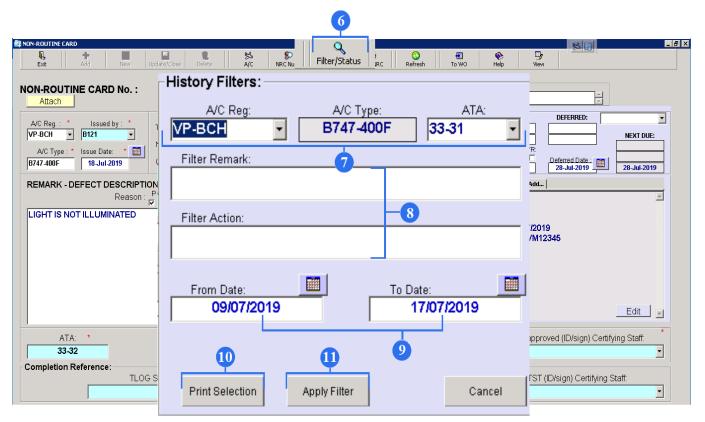

3. Push "NRC Num." button on the upper toolbar, NRC Card Num will open.

4. Use filters to select open or close NRC.

5. Enter the NRC number according to which the defect was opened or was closed. Click two times on the NRC number.

NRC screen with related number will open.

6. If you want to find any necessary information by using history filters click on the "Filter/Status" button.

7. Select A/C registration and ATA number.

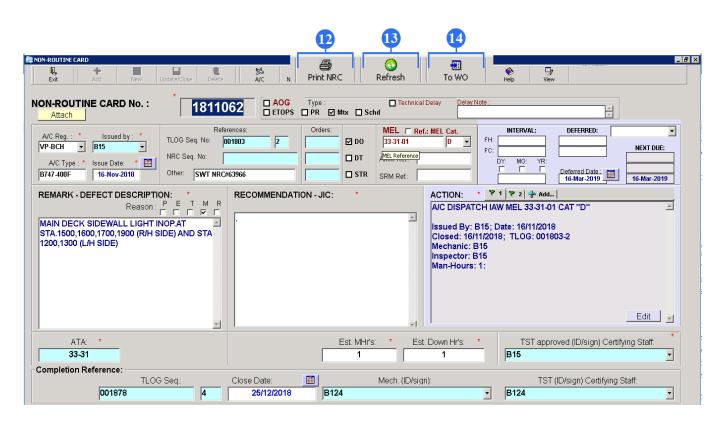

8. Use Remark and Action filters to find NRC to find by words.

9. Select time interval.

10 Push "Print Selection" button if you want to print data.

11. Push "Apply Filter" button to open NRC data.

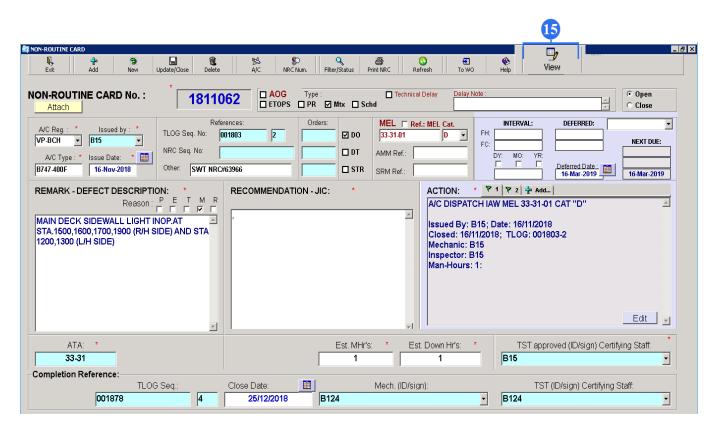

12. If you want to print current push "Print NRC" button.

13. If you want to refresh NRC screen during NRC creating push "Refresh" button.

14. After completion of the NRC creation with MEL you can push "WO" on the toolbar to make work order for defect rectification. It is comfortable if you use LSM (Line Station Maintenance) module. After click of "WO" button work order will display in the LSM module where you can print it and issue to work.

15. To monitor absolutely all creating NRC you can click on the "View" on the upper toolbar and NRC list will open.

6. Select Power Plant to click on it.

NOTE: If Thrust Model for Selected PN was not found (first run for instance) message will appear on screen.

7. After Power Plant selection Actual Components (lower parts) and LLP Status List will appear on screen.

2. Create Thrust Model and fill LLP List

1. At First Run user has to create Thrust Rate Model for selected Power Plant PN using editor and then save additional information using editor.

CAUTION: "Current Thrust Rate" is mandatory field – user has to select one of it from Thrust Rate Model.

2. To Fill LLP List with PN and SN user has to select required Component from actual Power Plant structure.

3. Push transfer button with one tick. To transfer all components to Status List push transfer button with double tick.

4. Use button with arrow to extend or retract LLP Status List.

5. The LLP List will reflect next component information on screen:

- Part Total (orange column) Total FC from Maintenance Plan (variable value).
- Total FC on the Current Thrust Rate (yellow column) – this is a calculated field.
 For Instance: [Total 7B26] = [Part Total]– [Total 7B24/22] – [Total 7B27/B1]
- Remains FC calculated field base on formula from Power Plant Shop Manual.

6. At First Run user has to fill required field such us: [Model No]

7. And LLP Limits for each PN's Thrust Rate base on information from Power Plant Shop Manual. To do that, click on required cell then yellow field will appear, type data on that field and then press "Enter" key on keyboard. "Enter" key is trigger for system - data must be saved.

Base on Remains Value and Aircraft's Average Value (item 8) system will calculate Due Date (item 9).

10. To Print LLP Status Report push "Excel" button. System will generate report in "Excel" format.

Shortage User guidance

Contents

1.	. Shortage Registration	334
2.	Shortage Items Addition	339
3.	. Shortage Status	343

1. Shortage Registration

Shortage sub-module is necessary to create part ordered request.

If there are no required materials for the task completion, a shortage must be registered. After the registration, this shortage will be displayed in the Stock Module (Shortage sub-module).

1. Click on the SHORTAGE button to enter the screen.

Note / Description:	<u> </u>		
Priority Date : *	Issued By : *	Ship to : *	1
□ MEL: Open	MEL Expiration		
□ AOG	User	Name:	

3. A Shortage number, a user group and a registration date will be generated automatically.

4. Enter an aircraft type, registration and why a shortage is registered (Use For, Use Number), write a description/note.

5. Select a priority date (when a particular component should be delivered). Select "Issued By" and "Ship to". Tick the "MEL:Open" field or "AOG" field (Aircraft On the Ground), if urgent materials are required. All shortages, marked with AOG, are in red colour in a Shortage List. Select MEL Expiration and User Name.

6. To add a new shortage, click on the Add button.

1. To view the items status of a particular shortage, view a Status-Quantity column:

- 'N' means a new item, just registered (in white color in the shortage materials item list);

- 'O' means an ordered item, but it's not in stock yet (in yellow color in the shortage materials item list);

- 'S' means an item in stock (in green color in the shortage materials item list).

2. You may also view a history of closed shortages by using a filter.

3. To view what shortages different department ordered, use a line maintenance/base maintenance/engineering/ work shop/stock/history-search tab.

Reports User guidance

Contents

1. Reports	346
2. Tasks Status	349
2. Component Status	355
3. Reliability	359

1. Reports

The Reports sub-module is used for printing out final reports on planning, components, taskschecks, modifications, aircraft-engines and work packages. To open Reports sub-module

- 1. Select "Actual Structure" tab.
- 2. Highlight necessary aircraft registration.
- 3. Push "Reports" button.

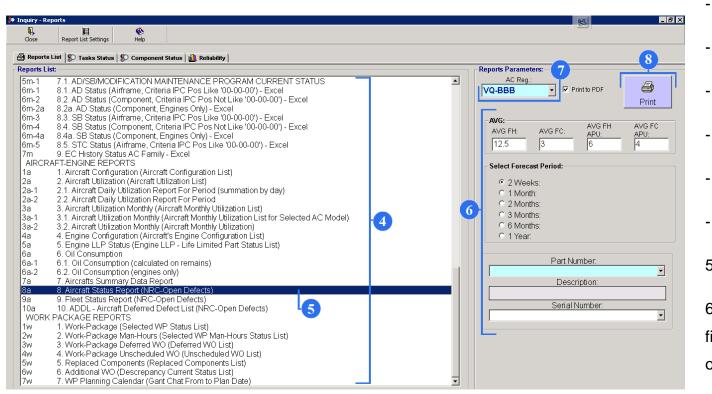

4. In the "Report List" screen you can see report type such as:

- Planning
- Task -Check
- Component
- Modification
- Aircraft Engine
- Work Package
- 5. Highlight any necessary report.

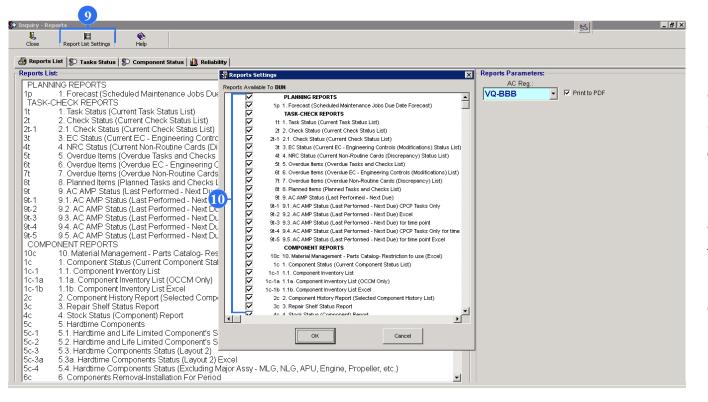

6. For each type of reports there are several filters, which can be used for accurate data print out.

7. You can change aircraft registration

8. Having selected filter criteria, click on the "Print".

9. On the upper toolbar push on the "Report List Settings" and Reporting Settings screen will be opened.

10. From the whole of the Reports list you can add or remove any ticks. If you remove the tick, the corresponding report will disappear in the Reports List screen. If you add the tick, the corresponding report will appear in the Reports List screen.

2. Tasks Status

7. To monitor current status or to see history of components click on the Full Status (Current Status and History) tab.

8. Use Part Number, Serial Number, Description,IPS position or position fields for exact search.Check box Show All SN's for Selected PN.

9. In the List of Components screen select any necessary component, also you can check box Select ALL to choose all components. Select from the whole of the list necessary aircraft registration. And push "Show TBR" button to apply a show selection of components time between replacement.

10. To apply and show selection of components history push Show HISTORY button.

1								

- 1. To get reliability report click on the Reliability tab.
- From the whole list select necessary report.
 Type of reports depends on customer.
- 3. In the Reports Parameters Editor enter AC Reg, AC type, time period and alert value.
- 4. Push Printer button.

5. Consider a sample reliability report such as Aircraft/Fleet Total Utilization.

6. In the Report Parameters editor enter aircraft registration (AC Reg field) and Date Period. Push Print button to get report.

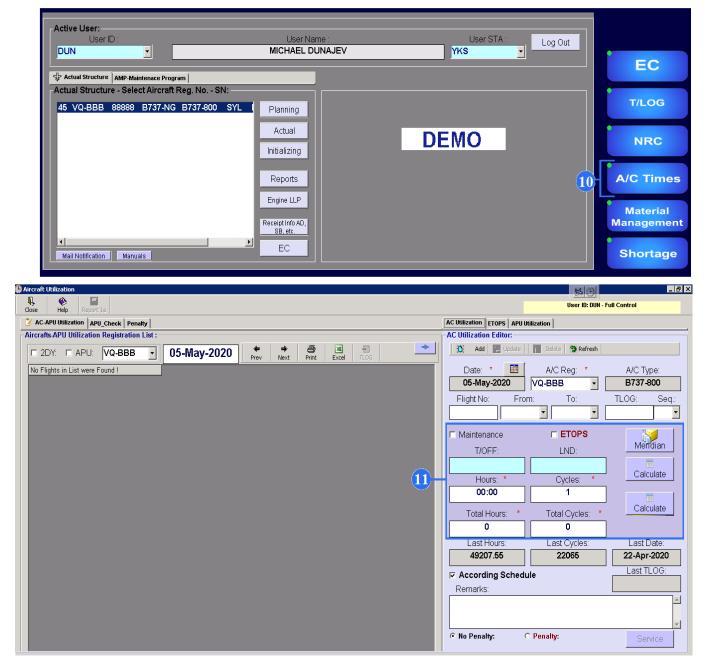

As a result, you get three graphs.

7. The first graph is Hours and Landings per Months, where the blue column is total hours and orange column is total flight cycles.

8. The second graph is Average Daily Utilization per Month. The blue line is average flight hours, the orange line is average flight cycles.

9. The third graph is Average Flight Duration.

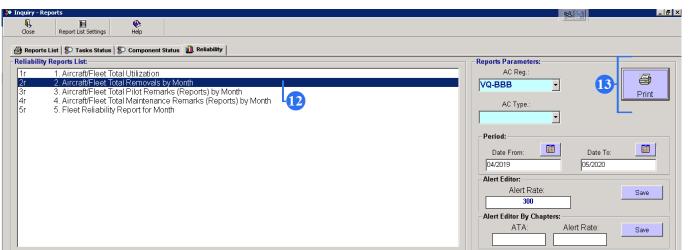

10. To generate the reliability report it is necessary to start A/C Times submodule.

11. Enter always take off time and landing time and click on the Calculate. You can get total flight hours and cycles.

Based on this data, Aircraft/Fleet Total Utilization report is generated.

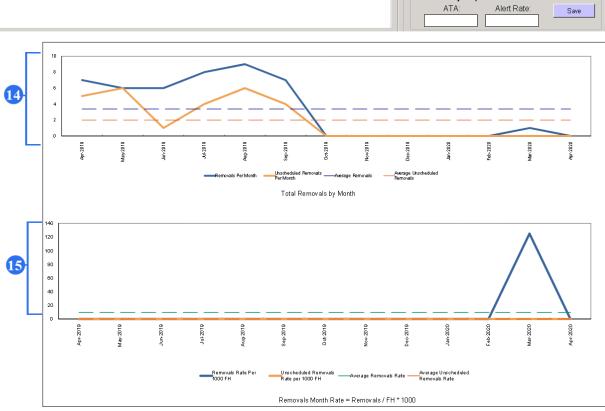

12. Consider a sample reliability report such as Aircraft/Fleet Total Removals by Months.

13. In the Report Parameters editor enter aircraft registration (AC Reg field), Date Period and fill Alert Editor. Push Print button to get report.

As a result, you get two graphs.

14. The first graph is Total Removals by Month, where blue line is removal for month, orange line is unscheduled removal per month, dotted lines are average removal.

15. The second graph is Removal Month Rate, i.e. Removals/FH*1000.

16. Also, you can get report of Removals Rate by Chapters through total table and charts for each system.

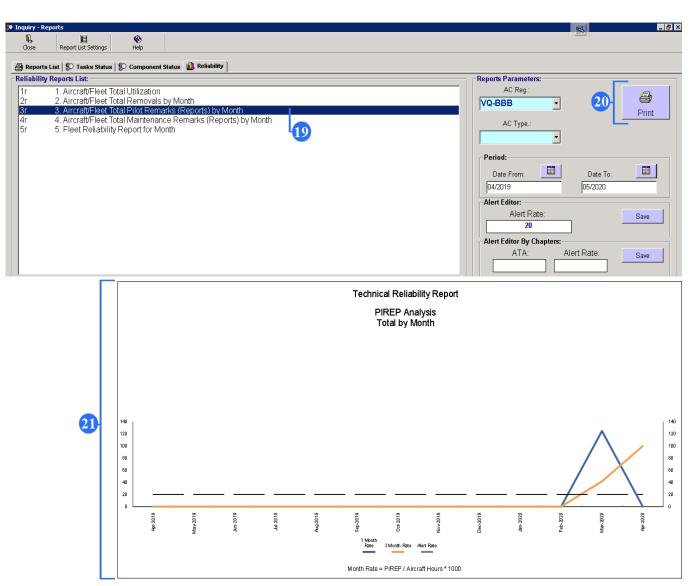

17. To generate the reliability report it is necessary to start Actual submodule.

18. In Actual submodule you can registrated removal of component. Fill all important fields to generate removal per month report.

If you tick the Unscheduled Replacement field, you get unscheduled removal per month report.

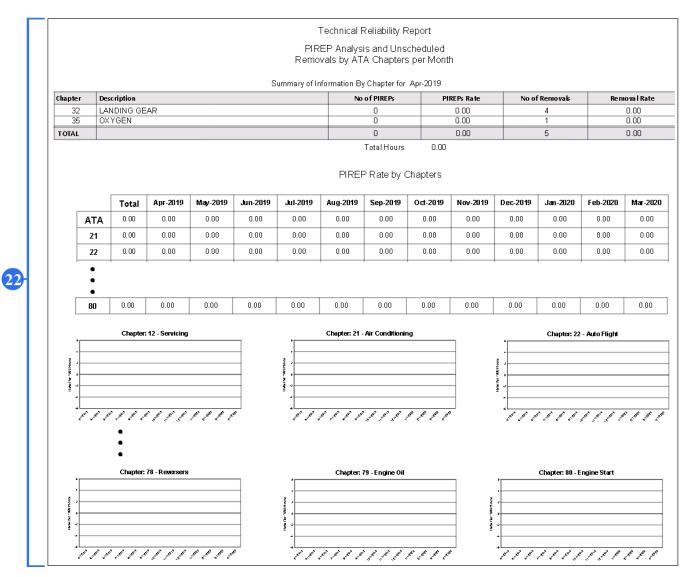

19. Consider a sample reliability report such as Aircraft/Fleet Total Pilot Remarks (Report) by Month.

20. In the Report Parameters editor enter aircraft registration (AC Reg field), Date Period and fill Alert Editor. Push Print button to get report.

As a result, you get:

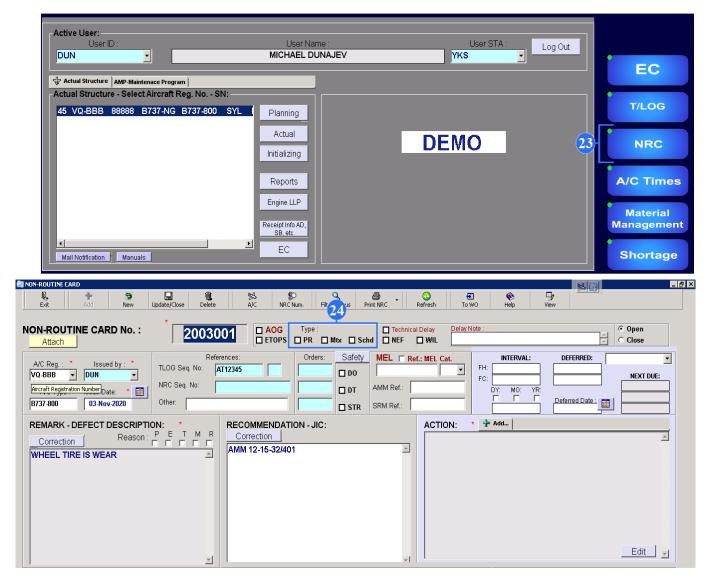

21. Graph of PIREP (Pilot Report) /Aircraft Hours *1000, where blue line is PIREP per Month, orange line is PIREP per 3 Month and dotted line is alert value.

22. Also, you can get PIPER Analysis and Unscheduled Removals by ATA Chapters per Month and PIPER Rate by Chapters through total table and charts for each system.

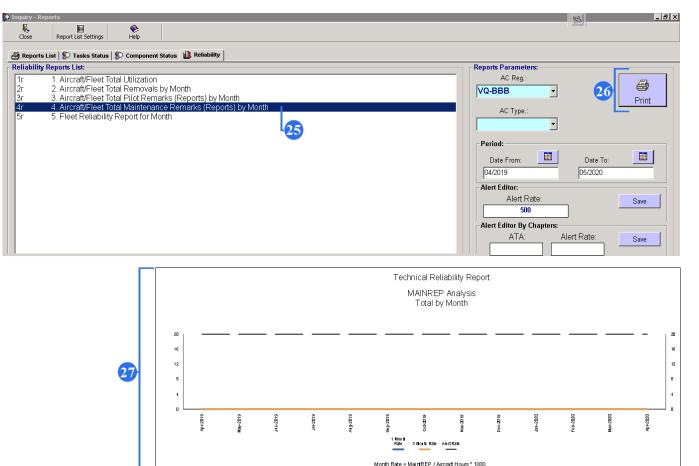

23. To create the reliability report it is necessary to start NRC submodule.

24. If you want that PIREP report will be generated, tick the PR field, where PR – Pilot Remark.

25. Consider a sample reliability report such as Aircraft/Fleet Total Maintenance Remarks (Reports) by Month..

26. In the Report Parameters editor enter aircraft registration (AC Reg field), Date Period and fill Alert Editor. Push Print button to get report.

As a result, you get:

27. Graph of MAINREP (Maintenance Report) /Aircraft Hours *1000, where blue line is MaintREP per Month, orange line is MainREP per 3 Month and dotted line is alert value.
